
LARGE PRESS BRAKES WITH AUTOMATED PLATE METAL HANDLING

1. Front and back gauges for automated plate metal handling.
2. Our advanced laser systems measure the bending angle in real time, ensuring high accuracy.
3. The automatic crowning table minimze the press deflection during bending, ensuring consistent accuracy.
4. Variable V-die lower tools paired with hydraulic clamping upper tools for quick setup
5. Single and Tandem machines
6. Great attention to energy consumption for a greener world.

Equipped with CNC systems and integrated automation for a fast and optimized management of bending processes.

Our press brakes offer precise and uniform bending, ensuring adaptability to various types of materials and thicknesses.

Designed for industrial operations, SOMO machines ensure continuous, highperformance production.
