Sustainability is **SustainabITALY**

Italy's expertise in urban regeneration, coupled with its relentless pursuit of innovation and sustainable technology, is pivotal in reshaping the construction industry. The latest advancements in products, technologies, and machinery within Italy's building and construction sector epitomize a harmonious blend of tradition and innovation, solidifying its status as a global leader in sustainable urban living. Characterized by resilience, innovation, and sustainability, Italy's construction sector beckons global exporters to advance construction practices. Companies offering cutting-edge solutions aligned with sustainability goals are poised for success in this dynamic market.

Italy ranks ninth in the world on its annual list of Top 10 Countries and Regions for LEED (Leadership in Energy and Environmental Design, the most widely used green building rating system in the world) in 2022. The ranking highlights countries and regions outside the United States that are making significant strides in healthy, sustainable building design, construction and operations. In 2022, 96 LEED projects were certified in Italy, representing more than 1.34 million gross square meters (GSM) of space.

Environmental sustainability has become a priority for the Italian building and construction sector and stakeholders along the whole construction value chain are becoming more responsible and are developing solutions and technologies to reduce their environmental impact. The Italian green construction market is increasing very quickly; it is on track to reach a value of \$187.4 billion US Dollars by 2027 with an annual increase rate of 8.6% (source: US survey by Research & Markets – Environmental Leader).

Over the last years, more than 45.000 companies in the sector (29% of total) have made green investments to improve processes and products with a view to sustainability. A process that, if pursued and enhanced, could help the energy requalification of the national real estate assets, responsible for about 40% of CO2 emissions, reducing dependency on traditional fossil fuels and making the making the Italian building industry one of the most modern and competitive in the world.

With a consistent demand for 'Made in Italy' products, Italy's dedication to reshaping its construction sector positions it as a central player in global trends, technological advancements, and sustainable practices. For this reason, we are presenting Italy at the "Big 5 2023" with the motto: Sustainability is Sustainab-ITALY!

ITALIAN TRADE AGENCY - ITA

ITA - Italian Trade Agency is the Governmental agency that supports the business development of our companies abroad and promotes the attraction of foreign investment in Italy. With a motivated and modern organization and a widespread network of overseas offices, ITA provides information, assistance, consulting, promotion and training to Italian small and medium-sized businesses. CASEITALY

CASEITALY is a new and innovative format to promote the Italian companies of the building envelope and technical components. It has been developed by four benchmark Associations (ACMI, ANFIT, ASSITES, PILE), with the support and direction of FINCO Federation (Federazione Industrie e Costruzioni) and the decisive support of MAECI (Italian Ministry of Foreign Affairs and International Cooperation), through ITA (Italian Trade Agency).

CASEITALY symbolises the best of Italian production, values and qualities. It represents the sectors of windows, doors, gates, shutters, roofings, tinsmithery, technical curtains, flyscreens, sunscreen protection systems and components, safety harnesses and belts, façades and other sectors linked to construction.

With CASEITALY, the focus of the foreign operators attending BIG5 Dubai will be on the value of the "Made in Italy" of the building envelope, of thousands of companies and their operators that represent an excellence recognised (if not yet fully known) by the rest of the world.

FINCO

FINCO - Italian Federation of Industries for Products, Systems and Services for Construction, Maintenance, Mobility and Cultural Assets and Heritage

As Federation Finco is not directly related to firms but to National Associated Organizations of Construction Sector. At the moment it puts together 40 Associations representing, among the others, the following fields: historical and monumental restoration, renewable energies (e.g. biomass, geothermy and hydroelectricity), doors, overhead doors, shutters, roofings, tecnical curtains, mosquito nets, external and sunscreen protection systems and components, safety harnesses and belts, metal carpentry, fireplaces and stoves for interiors, safety fire systems, fastening tools, sound barriers, scaffoldings, geognosy surveys, accident prevention signs, façades with integrated sunshade systems, metal sheet building pieces, solar shields, zenithal systems, curtain wall, aluminium and pvc windows, doors and gates, rolling shutter, loading systems, roofing systems, pluvial and gutters, condominium administration companies, remediation and asbestos removal services, parkland and landscaping companies (realization and maintenance), plant system suppliers, war mine clearance and other services sectors linked to construct

The Federation aims to increase the value and the visibility of each Federated Association. FINCO mainly operates when its action can be more effective than the single Associations operating alone, helping firms to get in touch with the international market.

FINCO operates on behalf of its own Association through:

- parliamentary and Ministerial lobbying for the adoption of laws and decrees in order to help the represented sectors: providing amendments in the general legislative procedures (for example the Financial Law and related measures); following and stimulating the Public Administration work in significant issues (e.g. the Inter-ministerial Decree about the CE marking on the building products);
- coordination and strengthening of the Italian producers of materials, equipment and services inside the construction sector;
- involvement in working groups on Ministerial issues, integrating and strengthening the weight of each Association;
- collaborations with public or private national or international organizations belonging to the building and infrastructural sector;
- organization and management of internal Working Groups to deal with the considerable issues of the Associations;
- supplying the Associations with Counseling Services through experienced subjects in different sectors;
- promotion of events which allow to expand the market of the building materials, services and equipment.

ACMI – ASSOCOSTRUTTORI CHIUSURE E MECCANISMI ITALIA

ACMI is the Italian Association that gathers the manufacturers of technical doors, windows and shutters for every type of civil and industrial application, in any type of construction and regardless of the material used for their making, as well as components and accessories to complement and integrate them.

The Association offers support in the issues of specific interest to the represented the market sector, keeping relations with public and governmental organizations, testing and research laboratories, standardization and certification bodies, Italian and foreign, in charge of the areas of interest of its members.

ACMI prepares and offers business consulting services helping its associates to achieve the qualifications needed for the production and marketing of products of their interest.

ANFIT - ASSOCIAZIONE NAZIONALE PER LA TUTELA DELLA FINESTRA MADE IN ITALY

ANFIT's main purpose is to promote quality windows conceived, designed and crafted entirely in Italy by Italian companies, inspecting and ensuring that strict quality, safety, environmental protection and energy savings criteria are met for consumer satisfaction.

ANFIT's goal is to protect the Italian quality market and production chain in compliance with the regulations. ANFIT's commitment is to the technical and qualitative improvement and upgrade of manufacturing, regardless of the material used. ANFIT carries out promotional activities at public administrations, professional studies and media in general. Its main purpose is to protect the Italian quality market and production chain abroad as well.

With a clear procedure, ANFIT determines the origin and quality of the product, thus enabling the end user to decide, independently and for their sole interest, on the purchase of windows made in Italy. This value must also be conveyed as best as possible to international markets, in order to support and increase the added value of such products.

ANFIT informs its Members of technical and regulatory updates, and takes part in the Italian and European decision-making processes that determine the rules of the market to protect Italian window manufacturers.

Services provided include: the use of the QUALITY ANFIT marking and Energy Label; issuance of certificate of origin; special rates for laboratory tests; technical information with respective seminars and training courses; insurance policy for manufacturers, installers and consumers.

ANFIT participates at events, fairs, conferences, and fosters promotional campaigns with press articles to disseminate the Italian-made ANFIT window. The top companies in the sector of window and window frame production and installation operate within this Association. The window frames sold in Italy are required to bear the CE marking, but manufacturing the window frame in Italy requires higher standards. The designer is required to verify that, before they are installed, window frames comply with a number of features such as wind resistance.

The NPD value (No Performance Determined) does not discharge either the window-maker nor the designer from liability: ANFIT helps reduce risk and liability ensuring window frames perform according to national and international regulations. ANFIT arose from the need to defend and enforce compliance with regulations that differ very much from one another due to the distinctive features of our country. The obligation for the CE marking for window frames arose to protect the consumer and standardise production processes, but does not eliminate the obligations and responsibilities of manufacturers. The window frames manufactured by ANFIT members bear the Numbered Energy Label and the Installation Label, to make the whole production chain traceable.

ANFIT is the first association in Italy to have stipulated two insurance policies with "Reale Mutua Assicurazioni" to protect and guarantee manufacturers/installers and consumers.

ASSITES – Associazione italiana tende, schermature solari e chiusure tecniche oscurani

ASSITES' role is to represent the knowledge of blinds in their entirety – including solar shading, shutters, outdoor blinds, indoor blinds, and insect screens – in the national market and consumer perception. It actively works to spread knowledge of industry issues and to monitor market requirements, helping companies to meet them.

Qualified companies of any size – that manufacture and supply products and/or raw materials in the sector of solar shading, shutters, indoor and outdoor blinds, and insect screens – can become members of the Association. Additionally, professionals (technicians, consultants and scholars), sales agents or representatives and associations or industry bodies can also be part of the Association, as associate members and supporters.

ASSITES offers day-to-day assistance on industry entrepreneurship, and constant updates through news, information capsules and internal communications, monitoring trends and market developments at the national and international level and offering support to companies that wish to undertake a process of internationalization.

FARRICATIONE DI STRUTTURE METALLICHE PER TENDE DA SOLE E SIMILI

ABOUT US

Dirello is a complex and ambitious project with a precise growth strategy, which ties together all of the phases of innovation, planning, and strategy in a single location.

The spirit of Italy is at the center of the Dirello project, the energy of our nation is the driving force pushing us towards ever more state of the art solutions, inspired by the 100% Italian style so popular with overseas markets.

The pergolas "made by Dirello" reflect the latest outdoor trends in terms of outdoor style in the residential, contract and HoReCa sectors. The key to their success is the extreme versatility of a product that is tailor-made as it is hi-tech.

Innovation is a fundamental element in our growth, based on the Dirello legacy of creativity which is proven by the existence of multiple patents submitted and obtained. Continuous renewal is one of the business's strategic focus points since, for us, growing means anticipating the client needs, harmonizing all the elements that make our product, the perfect product... technology, materials, finishes and design.

IM.VA SRL

Stand No. Ar F211

The construction of technical doors has been our business for many decades. Professionalism that allows us to be considered among the major Made in Italy producers in this sector. Engineers and designers backed by a long experience in the company take up the challenge every day to find the most suitable closing solutions according to the characteristics required by customers.

The ultimate goal: to guarantee the execution of installations that are always perfect from the early stages but above all safe and functional in all conditions. Three adjoining production facilities of a total of 10.000 m² covered, automated plants, great skill of our operators, but above all consolidated technical expertise in the field of industrial doors of all sizes and types recognized internationally.

We are IM.VA: big technical closures Made in Italy.

RENOLIT, one of the world's leading plastic product manufacturers, has created in its Italy-based plant the RENOLIT PLYGOR, a composite panel for casting concrete on site.

RENOLIT PLYGOR is the greatest alternative to the classic HDO, MDO or phenolic films coated plywood panels:

- Ensures a faster forming and striking time thanks to its reduced weight (over 60% than a standard plywood).
- · Offers a greater number of reuses.
- Doesn't need striking oil.
- · Provides great concrete finish.

Our products respect the environment:

- · Are realized partially out of recycled material.
- · Do not contribute to deforestation.
- · Can be 100% recyclable!

RENOLIT is developing products that suit the market needs, prioritising quality and efficiency and aiming at a full circular economy. With our commitment to a more circular economy, we help to preserve resources and save energy to maintain the livelihoods and quality of life of present and future generations on earth.

WOODALLGARDEN SRL

Stand No. Ar H220

OUTDOOR, ROOFS, PERGOLAS AND SUNSHADE TOTALLY IN ALUMINIUM

Born in Salento (Italy), in 1995, a new way of designing your home, creating aluminium profiles painted wood effect.

In 2000 this culture created the first pergola in the world made entirely of wood-effect painted aluminium and, at the same time, the first aluminium wall and privacy screen grid, still exclusive to Woodallgarden.

The same technology, allows to combine engineering and practicality, beauty with robustness, reliability with versatility, efficiency with tailoring, innovation with craftsmanship, and places Woodallgarden as a reference industry also in the production of bioclimatic covering systems for all environments, where it expresses absolute excellence by creating solutions that are difficult to imitate.

Panoramic windows, vertical blinds, photovoltaic pergolas, carport, winter gardens, complete the production of a range of products that has no equal in the sector, all exclusively MADE IN ITALY.

This year Woodallgarden presents three absolute innovations, thanks to its technology:

- 1) the first ANTIBACTERIAL bioclimatic pergola and sunshade system
- 2) the first fully INSULATED aluminium pergola
- 3) the first panoramic windows with ARTISTIC glass

See you soon.
