PRESS KIT

StoneOak®

A unique wood extracted from the earth after being buried for hundreds of years.

We named it StoneOak® because its texture evokes stone in color and texture.

HISTORY

Logs that, following landslides and upheavals of the surface forest, have slipped underground and remained wrapped and protected under layers of clay that nature has been able to preserve for centuries, to make them resurface today in new and unprecedented beauty.

The anaerobic environment inhibited the development of microorganisms, protecting and isolating the wood forever, thus preventing its inexorable process of slow degradation.

Then nature did the rest.

Now, at a distance of time, sometimes as a result of excavations and drilling, sometimes as a result of natural phenomena such as landslides or other movements of the earth, the logs re-emerge with all their load of beauty.

ZANUSOlegno

COMPANY:

ZANUSOlegno was established in 1959 in Lissone and since then has been searching for the best woods in respect of tradition and the environment.

PRODUCTION:

- NATURAL VENEERS
- LUMBER
