YARN LIST

Fabric made with COOLMAX technology transports moisture away from the body, allowing fast evaporation and keeping your feet cool and dry on hot days. Moreover it provides insulation on colder days. Composition: 100% polyester

Enjoy the lightweight warmth of THERMOLITE® brand technologies, a family of polyester fibers and insulations designed to help you stay warm as the temperature drops

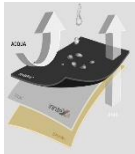

Primaloft is a warm insulating yarn, softer than cashmere. It moves moisture away from your skin and dries faster than merino wool. It guarantees maximum comfort and performances, becoming one of the most demanded yarn in winter sportswear. Composition: 100% polyester.

REPETITA®
The loop fiber.

Transform 100% post-consumer-waste plastic bottles in to 100% recycled polyester filament yarn.

Special waterproof but breathable membrane that can be added on any product.

CRY®
COATED REFLECTIVE YARN

Special reflective glass yarn, ensures high visibility at night. At daylight it is of a light grey color; at night it is reflective. It can be used only for horizontal bands or lines (not for designs/patterns). Can not be used in knee-high socks.

Composition: 64% glass beads, 18% polyester, 12% resin, 6% polyamide

Gilmatex

CUSTOM SOCKS
SPORT & CASUAL

Nylon 6

Polyamide or Nylon is a synthetic fiber easy to dye and very resistant to abrasions. It is available in hundreds of colors and counts. Composition: 100% polyamide

A polyamide 6.6 fibre in which silver ions are inserted directly during the spinning process meaning that it limits bacterial growth preventing body odor. Q-SKIN® takes care of the skin, providing its wearer with breathability, freshness, hygiene and comfort. Composition: 100% polyamide

An environmentally-sustainable nylon 6.6 fibre obtained from regenerated raw materials and which meets given traceability requirements. Composition: 100% polyamide

LYCRA® fibre can be stretched up to seven times its original length without breaking. Once stretched, LYCRA® fibre returns immediately to its original length – over and over again. Long-lasting elasticity. LYCRA® fibre is never used alone. It is used in all types of fabrics and blended with man-made or natural fibres.

PROLEN®

Hollow fibre, ultra light and elastic, but resistant to abrasions and tears. It is thermoregulator, leaving the skin dry and maintaining the ideal temperature for the body. Hypoallergenic, it limits the multiplication of bacteria and reduces bad smells. Composition: 100% polypropylene

Dryarn® is an innovative high-performance fiber: light, insulating, resistant and breathable, composed of polypropylene microfibers. The use of Dryarn® in sportswear guarantees high levels of performance

Breathable and water-repellent yarn, Cordura® is a really durable fabric, which makes all garments extra-tough and resistant to tears and abrasions It is used in technical and work wear, as well as in outdoor and military apparel. Composition: 100% polyamide

Renüa

Renua is a 100% recycled polyamide 6 yarn. It is obtained from waste of raw materials of the production phase.

Gilmatex

CUSTOM SOCKS
SPORT & CASUAL

Silk

Silk is an animal fiber obtained from the spinning of cocoons.

This fiber ensures thermal insulation, both from cold and warm temperatures, absorbs moisture and is extremely soft and smooth. Silk is also antibacterial, hypoallergenic, helps breathability, protect from UV rays, natural, soft and lightweight

The silk also has a great tensile strength.

100% natural yarn, Cotton is a soft, fluffy [fiber](#) that grows from cotton plants. The fiber is most often spun into [yarn](#) or thread and used to make a soft, [breathable textile](#).

It is available in hundreds of colors and numerous counts.

MERINO WOOL

It is the best wool available in the market and is one of the softest types of wool available, because of finer fibers. Merino wool is common in high-end, performance athletic wear and gear. Typically meant for use in running, hiking, skiing, mountain climbing, cycling, hunting and in other types of outdoor aerobic exercise, these clothes and accessories command a premium over synthetic fabrics. Merino is excellent at regulating body temperature, it draws moisture away from the skin. Like most wools, merino contains lanolin, which has antibacterial properties, resulting in reduced human body odor.

Cashmere

Cashmere wool, usually simply known as cashmere, is a [fiber](#) obtained from [cashmere goats](#), [Capra hircus](#). The word *cashmere* is an old spelling of the [Kashmir](#) region in northern [India](#) and [Pakistan](#).

Cashmere is fine in texture, light, and soft. Garments made from it provide excellent insulation, approximately three times that of [sheep](#) wool. Cashmere is also softer than regular wool.

The yarn we use for sock production is a blend with merino wool.

By buying cotton products from Filmar, you're supporting The Better Cotton Initiative and BCI Farmers who use water efficiently, care for the health of the soil and natural habitats, reduce use of the most harmful chemicals and respect the rights and wellbeing of workers. Biofil C20 is produced by Filmar, using only organic cotton guaranteed by the Global Organic Textile Standard (GOTS).
