

contains slow release nitrogen and phosphorus
suitable for all crops
it increases soil's productivity
it improves resistance to drought and
temperature changes

ACTIVEPLUS IN THE FORM OF PELLETS IS AVAILABLE IN THE FOLLOWING PACKAGES:

PE BAG 25 KG
NET PACKAGING

NON-RETURN BIG BAG
OD 500 KG
NET PACKAGING

NB HYGROSCOPIC PRODUCT

ORGANIC FERTILIZER NP ALLOWED IN BIOLOGICAL AGRICULTURE

ACTIPLUS is an organic fertilizer obtained through a controlled treatment of selected raw materials: bone meal and meat meal. The final product is rich in nutritive elements with high agronomic efficiency and organic matter. It is suitable for all plants, it unites agriculture and environment, has an efficient and sustainable effect and can be easily strewn with fertilizer spreader.

MAIN AGRONOMIC BENEFITS

- Provides for cultures nitrogen and phosphorus of biological origin;
- Nitrogen in organic form ensures greater agronomic efficiency and minimal losses by runoff;
- The phosphorus of biological origin gets available gradually and undergoes to a negligible extent the phenomena of insolubilization;
- The high content of organic substance has an improving effect on soil that integrates and enhances its nutritive role.

MAIN ENVIRONMENTAL BENEFITS

- An increased agronomic efficiency of organic fertilizers allow to reduce the used doses and therefore to significantly contain the impact on the environment, without penalizing agricultural production;
- Organic undiluted nitrogen and phosphorus which is not subject to insolubility are technical tools that allow to achieve these advantages;
- ACTIPLUS is allowed in biological agriculture.

PLANTS AND DOSAGE

TREE CROPS: (grapes, olives, citrus fruits and fruits)	4-10	q.l./ha
HORTICULTURAL: (potato, tomato, aubergine, fennel, strawberry)	5-12	q.l./ha
HERBACEOUS: (wheat, corn, field bean, lucerne)	5-10	q.l./ha

NB The distribution doses may vary according to the pedo-climatic characteristics of each area (chemical, physical and biological fertility, rainfall, and temperature) and must be included in the fertilization plan. The distribution quantities must stay on maximum values if the soil is poor of organic matter, on average values, in case of medium-textured soils and on minimum values in case of heavy soil. It is advisable to lightly bury into the soil (10-15 cm) Actiplus in the form of pellets, to improve the action of the product, avoiding direct contact with the roots of the plant (its function is being carried out even if strewn only superficially). The product is homogeneous, cylindrical, and thanks to its particular structure and innovative productive process, allows to:

- keep the bacterial micro fauna useful for the soil;
- maintain its physical state during storage;
- fast disintegration and immediate effect in the field.

Keep out of reach of children and animals. Protect yourself by using appropriate gloves and pay attention not to inhale the powders.

ORGANIC FERTILIZER NP

MIXTURE OF ORGANIC FERTILIZERS NP

ELEMENTS OR USEFUL SUBSTANCE	VALUE
Organic Nitrogen (N)	4%
Total Phosphorous Pentoxide (P ₂ O ₅)	6%
Organic Carbon (C) of Biological Origin	30%

ALLOWED IN BIOLOGICAL AGRICULTURE

Raw materials: meat meal, bone meal.

Obtained exclusively
from organic fertilizers
"allowed in biological agriculture".
