Ribo**FEED**

POULTRY

RIBOFEED is a natural ingredient with high concentration of 5' FREE NUCLEOTIDES and TOTAL NUCLEIC ACIDS from yeast.

RIBOFEED provides essential nucleotides that are crucial during the early stages of poultry development, when rapid intestinal growth and immune system maturation are critical.

The superior bioavailability of free nucleotides in RIBOFEED supports young animals during the critical early stages of life by promoting new cell formation, strengthening intestinal integrity, and improving nutrient absorption, leading to healthier birds with enhanced performance.

NATURAL
PRODUCT

FROM THE LAB TO THE FIELD

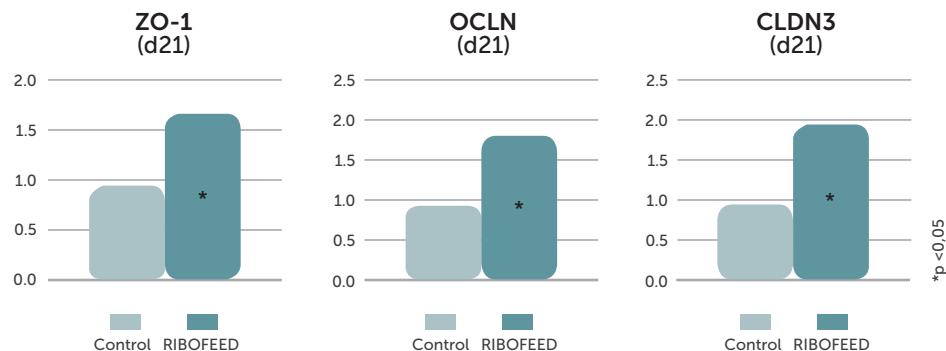

RIBOFEED improves intestinal function, as evidenced by enhanced intestinal morphology, supporting better nutrient absorption and overall gut health.

INTESTINAL FUNCTION

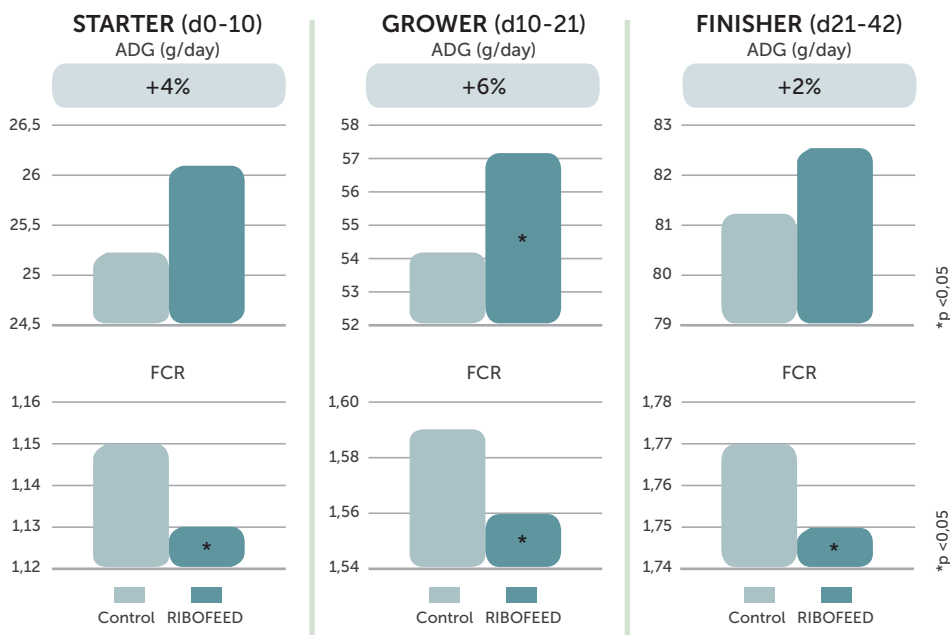

RIBOFEED strengthens tight junction proteins, reinforcing the intestinal barrier against pathogens. This enhances gut integrity, reduces permeability, and supports animals' immune defense.

BARRIER FUNCTION AGAINST PATHOGENS

Thanks to proper gut development, **RIBOFEED** maximizes performance across all key stages of poultry growth. This early support ensures optimal intestinal function, paving the way for excellent future performance.

BOOSTING PERFORMANCE

DOSAGE: 80-160 ppm
