PROJECT

MAGESTIO

The software for managing the entire Maintenance process, **leveraging Artificial Intelligence** and **Augmented Reality.**

OVERVIEW

MAGESTIO is the software that manages the entire maintenance process — from task management and resource allocation to reporting, analytics, and the standardization of operational procedures — to optimize your workflow.

OBJECTIVES

Reduce maintenance time and costs while improving operator performance through AI and AR.

Optimize technical and operational know-how through a digitalized maintenance process.

Centralize the management of routine, extraordinary, and periodic maintenance, as well as operational procedures.

ADVANTAGES

Preventive and optimized planning of human and technological resources

Increased productivity through a simplified and documented workflow

Increase in customer satisfaction, thanks to the reduction in response times

SOFTWARE

MAGESTIO consists of a web platform and a mobile app through which, after logging in, users will be able to:

[1] Perform maintenance tasks of any nature

[2] Standardize and manage operational procedures

[3] Manage and organize personnel into groups, monitoring their activities and issues

[4] Generate reports and statistics of the interventions
