Maintenance and sales specific machinery. To get the best from the air conditioning equipment is important to perform regular maintenance, such as replacing filters and cleaning complete unit.

SOS OZONO provides cleaning and disinfection of air conditioners with the specific method to ozone, ensuring:

- Clean the outer body, Cleaning the inner body, Removing and cleaning filters, Ozone Disinfection of the inner body and conduct

The company also specializes in the sale of machinery to ozone for cleaning of air conditioning systems.

Through the use of these innovative appliances that use ozone to eradicate viruses and bacteria, making it healthy and clean filtered air, you can do personally disinfection of air conditioners, especially in settings such as offices or hotels, as each machine capable of cleaning up to 30/40 conditioning systems per year.

SANITIZING AND CLEANING MATTRESSES: It is known that a good quality of life through a good quality of sleep, and to get it, it is essential that the place where you sleep is clean, free of parasites, bacteria and mites.

Dust mites, and especially their droppings, are triggering cause of disorders such as red eyes, swollen eyelids, irritation and rashes, nasal secretions and respiratory disorders. In a double mattress of medium age, nowadays, you can find more than a million and a half of these organisms. These little creatures, invisible to the human eye, like the hot, humid and dark. They feed on dandruff, hair and hair and skin

flakes that day we lose, then finding the perfect environment to breed in mattresses, sofas and carpets. It is essential for each of us to disinfect and sanitize their mattresses periodically (at least annually), particularly people living with animals, children, the elderly and people predisposed or subject to respiratory disorders.

Remember that if your mattress was clear there more!

HOW TO PROCEED

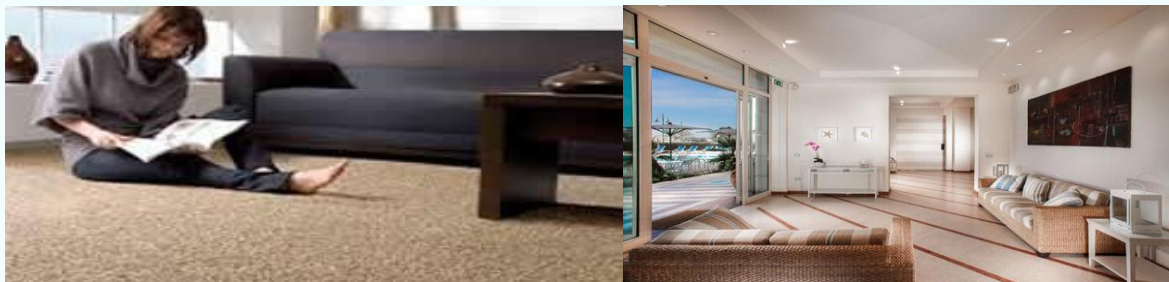

Our work is divided into three phases:

- **Reclamation:** the mattress is subjected to a strong suction vibration on both sides that pulverizes the dirt and brings it to the surface (this is visible by the customer).
- **Washing:** the mattress is washed with hot injection method and extraction.
- **Sanitation:** the mattress is sanitized using hypoallergenic products or through the innovative treatment offered by **SOS OZONO** that leverages the powerful antibacterial properties of ozone.

SOS OZONO works exclusively at home with highly skilled staff, always using advanced machinery and hypoallergenic products

The cleaning, washing and sanitizing is strictly targeted: we eliminate all the dirt without spilling into the surrounding air, and the result of our intervention is immediately visible.

SANITIZING AND CLEANING RUGS AND CARPETS- STERILIZE CARPETS AND CARPETING AT YOUR HOME OR AT YOUR ACCOMMODATION

WHY CLEAN CARPETS AND CARPETING?

Not everyone knows that carpets and carpeting are magnets for excellence of four external elements that, in the long run, cause a bad hygiene.

- **Airborne particles:** are fat particles, the result of air pollution that besides causing loss of color tissue, causing even the accession of further elements of dirt, making the glue for the other three types of elements.
- **Organic waste:** are caused by our daily living in the home: it is the food crumbs, hair, animal hair and human skin particles, residues of nails, dandruff, and so on.

- **Elements in the liquid state:** these are the most damaging: go deep tissue dragging airborne particles, solid and organic waste, causing a serious threat to the tissues both hygienic, both aesthetically.

All these elements are food for the dust mite. A regular cleaning with a vacuum cleaner or carpet cleaner domestic assures only clean the surface, but the fabric remains polluted to 70%. It is essential for each of us to disinfect and sanitize your carpets and rugs periodically (at least annually), particularly people living with animals, children, the elderly and people predisposed or subject to respiratory disorders.

CLEANING AND SANITIZING SOFAS AND ARMCHAIRS- SANITIZE SOFAS AND ARMCHAIRS IS FUNDAMENTAL TO LIVE IN A HEALTHY ENVIRONMENT

After a tiring day of work we have the desire to sit down on our armchair at home, without thinking that it is one of the ideal places to lurk dust and animal hair and to spawn several mites and allergens. How many times we happened to eat or drink on our couch and do the classic spot that eventually become indelible and annoying; these factors mean that armchairs and sofas are among the objects most dirty and unhygienic we have at home. Not enough to beat the cushions or vacuuming, what is needed is a targeted treatment and deep, free sofas and chairs from stains, dust mites, bacteria and all kinds of dirt. It is essential for each of us to disinfect and sanitize their armchairs and sofas periodically (at least annually), particularly people living with animals, children, the elderly and people predisposed or subject to respiratory disorders

SANITATION AND WASHING INTERIOR CAR, CARAVAN AND PULLMAN

A novelty of the **SOS OZONO** washing the interior of your vehicle. Each wash is customized, deciding together with the customer the place, date and time of the intervention.

WHY CLEAN THE INSIDE OF YOUR VEHICLE?

The vehicles are now the main means of transport of man. According to the latest statistics, an average user spends 4 to 12 hours total daily exclusively in the cockpit of his car, to be able to go to work, to accompany their children to school, for shopping, for recreation or business. We must therefore take into account the fact that your own car, truck, RV or bus is one of the ideal places for the spread of all kinds bacteria, fungi, molds, mites and dirt of all kinds. For example, the air conditioning system is the preferred place to settle Legionella: a bacterium which thrives in moist environments, with temperatures of 15-20 ° C, and that is transmitted through aerosols (the condensate, which often gets escape during the first few minutes of power plant). Moreover, it is almost always possible to detect the presence of molds in the trunk of the car, in particular under the coating of carpet, beneath the seats or on the fabric coverings. Our process of sanitizing and cleaning car interiors, is precisely to eliminate the presence of any form of parasites, mites or bacteria that may endanger the health of the user. It is essential for anyone who spends a lot of time in your car, or traveling with children, the elderly, animals and people prone to respiratory ailments to disinfect and sanitize their vehicles periodically.

HOW TO PROCEED

To carry out the process of cleaning and sanitizing, **SOS OZONO** uses equipment, products and electronic equipment guaranteed and certified by clinical studies and university that attest to the effectiveness in the field of employment. Also our means allow us to perform operations in places normally inaccessible, such as the conditioning circuit, the gaps and interstices. We can therefore ensure that following a our treatment, bacteria, molds, mites and fungi will be brought down by 99%.

Our work is divided into two phases:

- Dry: are sucked and wash all surfaces with fabric seats, doors, walls, seat backs, armrests, headrests plus mats and carpeting.
- Sanitizing: the vehicle is sanitized by exploiting the innovative treatment offered by **SOS OZONO** to ozone, good for the elimination of bacteria and especially of odors, such as tobacco.

Assessing the sanitation interior of boats, yachts and aircraft.
