

AIRNIVOL[®]
The orthodontic aligner

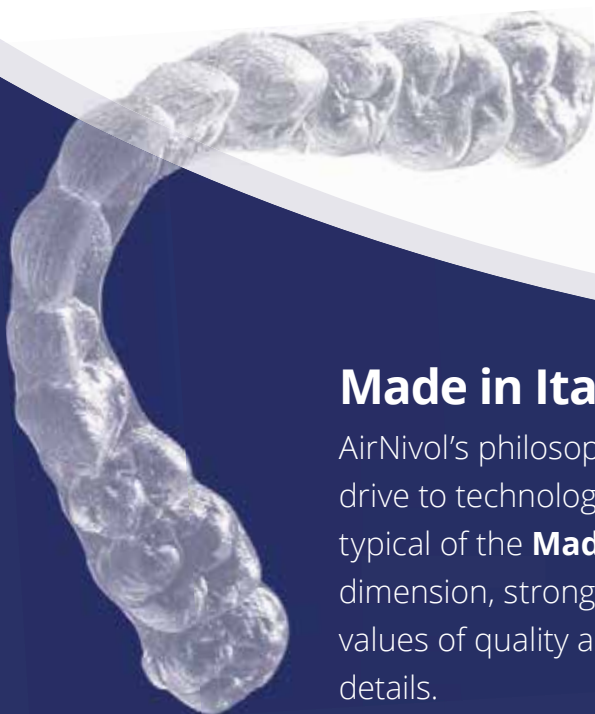

High technology
for a great smile

Excellence & Innovation

AirNivol is an orthodontic system developed to improve smile aesthetics and solve problems of dental malocclusions. Thanks to our technology and the experience of our team, **AirNivol has developed a product *par excellence***, designed for the needs of every single case.

The research and innovation activities carried out for years on intelligent technologies for **customized digital design**, smart materials and 3D printing, contributes making AirNivol a leader in the field, assuring reliable results where other aligner brands fail

Made in Italy

AirNivol's philosophy combines the drive to technological innovation typical of the **Made in Italy** dimension, strongly based on the values of quality and attention to details.

A close-up photograph of a man with dark, wavy hair, smiling warmly. He is wearing a white lab coat over a light blue collared shirt. He is holding a clear, U-shaped dental aligner in his right hand, showing it to the camera. The background is a soft, out-of-focus teal color.

The doctor at the center of things

Your case is not just a number for us. At AirNivol we strongly believe in the relationship with the doctors who choose us and the results and effectiveness of the treatment are always in the first place. For these reasons we have a daily interface with the orthodontic practice and we provide tailored services for dentists.

Clinical consultancy

AirNivol treatments are planned by the AirNivol technical designers and validated by a team of experienced orthodontists. This enables us to ensure reliable results superior to any other aligning system on the market.

A system designed not only for orthodontists

Even doctors who are not specialized in orthodontics can use AirNivol with their patients, requesting a dedicated counseling for planning and managing the treatments.

User friendly and fully digital workflow

A web-based operating platform reserved for professionals enables an easy management of any case. The 3D visualization software, the *Aircheck*, illustrates the phases of the treatment plan and shows the patient how to move each aligner step by step, so as to have the final result clear even before starting the treatment.

Solution of complex cases

AirNivol is an orthodontic system that is also suitable for solving complex cases and, due to its precision, it is an optimal solution for treatments prior to implant installation and for pre-surgical cases.

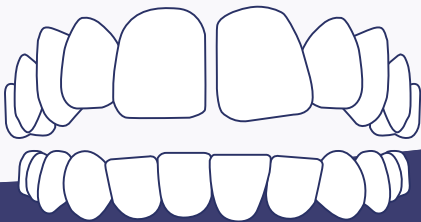

Training for doctors

AirNivol organizes numerous training courses. Furthermore, on the operating platform the doctor has access to the AirNivol Academy, the online certification program. This is full of explanatory videos and tutorials that support the professional in managing the AirNivol digital workflow.

4

Four types of treatment
to meet a wide range of
needs

AIRNIVOL Easy

Using a limited number of aligners for each arch, AirNivol-Easy is the most suitable **solution for treating minor problems.**

NUMBER OF ALIGNERS:
max. 8 per arch.

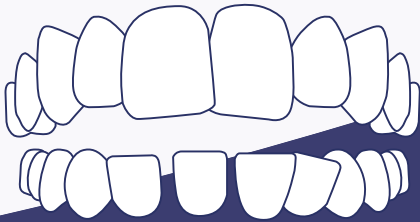

AIRNIVOL One

Similarly to AirNivol-Light, AirNivol-One is the treatment used to **correct cases of slight and moderate malocclusion**, but when the problem affects only one arch.

NUMBER OF ALIGNERS:
max. 16 for the selected arch.

AIRNIVOL Light

AirNivol-Light is the ideal treatment to **correct cases of crowding or minor diastema** for both dental arches.

NUMBER OF ALIGNERS:
max.16 per arch.

AIRNIVOL Complete

Used to treat a wide range of malocclusions for both arches, AirNivol Complete is the **most comprehensive treatment that AirNivol provides.**

NUMBER OF ALIGNERS:
more than 16 per arch.

Visit our website airnivol.com for more information, to view the courses calendar, and to stay updated on the AirNivol world!

**Making people smile has
never been easier!**
