- STUDENTS CHAIR WITH SEAT AND BACK IN BEECH

Construction features:

Stackable type structure, made with legs in tubular metal with dimensions of Ø mm. 25 x 1.5 thick, cold curved; stiffening crossbars under the seat.

Continuous wire welding, with subsequent brushing.

Painting of the metal tubes will be carried out with epoxy powders, by means of degreasing and phosphating treatment in a thermal tunnel.

Seat and back made of beech plywood with a thickness of mm. 7/8;

They will be painted in natural color with flame retardant transparent paints, anatomically shaped in order to allow a correct seated posture and fixed to the metal structure by means of expansion rivets in light alloy.

The seats comply with the dimensional requirements set by the UNI EN 1729 standard, including the specific tolerances that the standard allows.

Floor support At the base of the structure, anti-noise tips in non-slip plastic material are inserted which ensure sufficient silence during use and movement and do not scratch the floor.

Dimensions: 32x32x35h - 36x36x38h - 36x36x43h - 40x40x46h - 40x42x51h
