## YUGAAV / - ABOUT

- + We are a company located in Cadore, in the beating heart of the eyewear production.
- + We a structured network of people with knowledge and experience that works to solve problems by providing a concrete and measurable innovation.
- + We have a great passion for our work, we believe in ingenuity and in the possibility of reaching any engineering goal.

## CONCEPT

- + Yugaav comes from the need to have a product ad high technical content solving a specific problem.
- + Aluminum is a light but strong metal. Its density is  $2.71 \text{ g / cm}^3$ , which corresponds to a specific weight of about a third of steel and copper.
- + Fixing, as well as replacing a screw in aluminum, is a process that brings only problems and not solutions: the material is malleable and tends to deform on contact with steel screws. In this way, over time the screw escapes and it is no longer possible to re-screw it as the hole is worn out and deformed.
- + The eyewear industry has adapted to produce with other less performing metals as it has not, up to now, managed to solve the problems related to aluminum: lighter, easily workable, stable, resistant and hypoallergenic material.

**+ SILICON GUM:**  
hypoallergenic  
no yellowing

**+ ALUMINUM:**  
hypoallergenic  
ecological  
recyclable  
**resistant**

**+ BETA TITANIUM:**  
corrosion resistant  
strong like steel,  
but light double

## A COMFORT TECHNICALLY HIGHER

- + **ELASTIC RIM LOCK:** the rim of the eyeglasses closes and re-opens in an elastic way thanks to the internal spring. Mounting the lens becomes easy: at the time of assembly the pressure force widens the rim, and tightly wraps the lens.
- + **FRictional TEMPLES:** Thanks to the eyeglass mechanism, the temples remains in friction forever: it will never go into free fall.
- + **7,5 GRAMMS** is the total weight of glasses

## FIGHT TO FORGERY

+ In order to guarantee the originality of the product to the customer each piece is numbered and traceable. How?  
Thanks to the CERTIFICATE OF AUTHENTICITY which is delivered with glasses.

+ The number on the back of the nose of the glasses  
It is the same as the certificate.  
The certificate in turn has a secret number to be discovered by scratching the appropriate field.  
At this point, just send an email with both the codes to [code@yugaav.com](mailto:code@yugaav.com).

We will take care to verify that the numbers in our possession are the same as the customer: the first true certificate that can be really authenticated directly from the company.

## no paints, WE ANODIZE

- + Anodizing (also called anodic oxidation) is a non-spontaneous electrochemical process by which a protective oxide layer forms on the treated metal surface and protects it from corrosion.

The anodizing process is commonly used for aluminum. A real surface transformation takes place in the material: the bare metal reacts with the oxygen that develops during the electrodeposition process and forms an “alumina oxide”.

### PLUS:

- + Does not change color over the years (due to the sun)
- + It is hypoallergenic
