

Scientific Institute "G. GASLINI - Division of Dermatology" Genoa, Italy - Prof. E. Rampini
Efficacy and tolerability of 2 new preparations in the prevention of diaper rash.

"....an unfavorable impact has been recorded in just over 4% of cases compared with 12% of that normally described in the literature, in no case were observed allergic reactions. This is due to the intrinsic qualities and the synergism of **Lenidermina Cream and **Lenidermina Powder Liquid**. In conjunction with the use of **Lenidermina Detergent ...**"**

**SKIN IRRITATION
AND
DERMATITIS BY EXTERNAL AGENT**

**SKIN SUFFERS THE DAILY ATTACKS BY
CHEMICAL, BIOLOGICAL AND PHYSICAL AGENTS
THAT CAN DESTROY THE HYDROLIPIDIC FILM
WITH THE MOST COMMON RESULTS:
INFLAMMATION, XEROSIS, HYPERKERATOSIS
AND SKIN WHEAL**

DERMOCOSMETIC TREATMENT

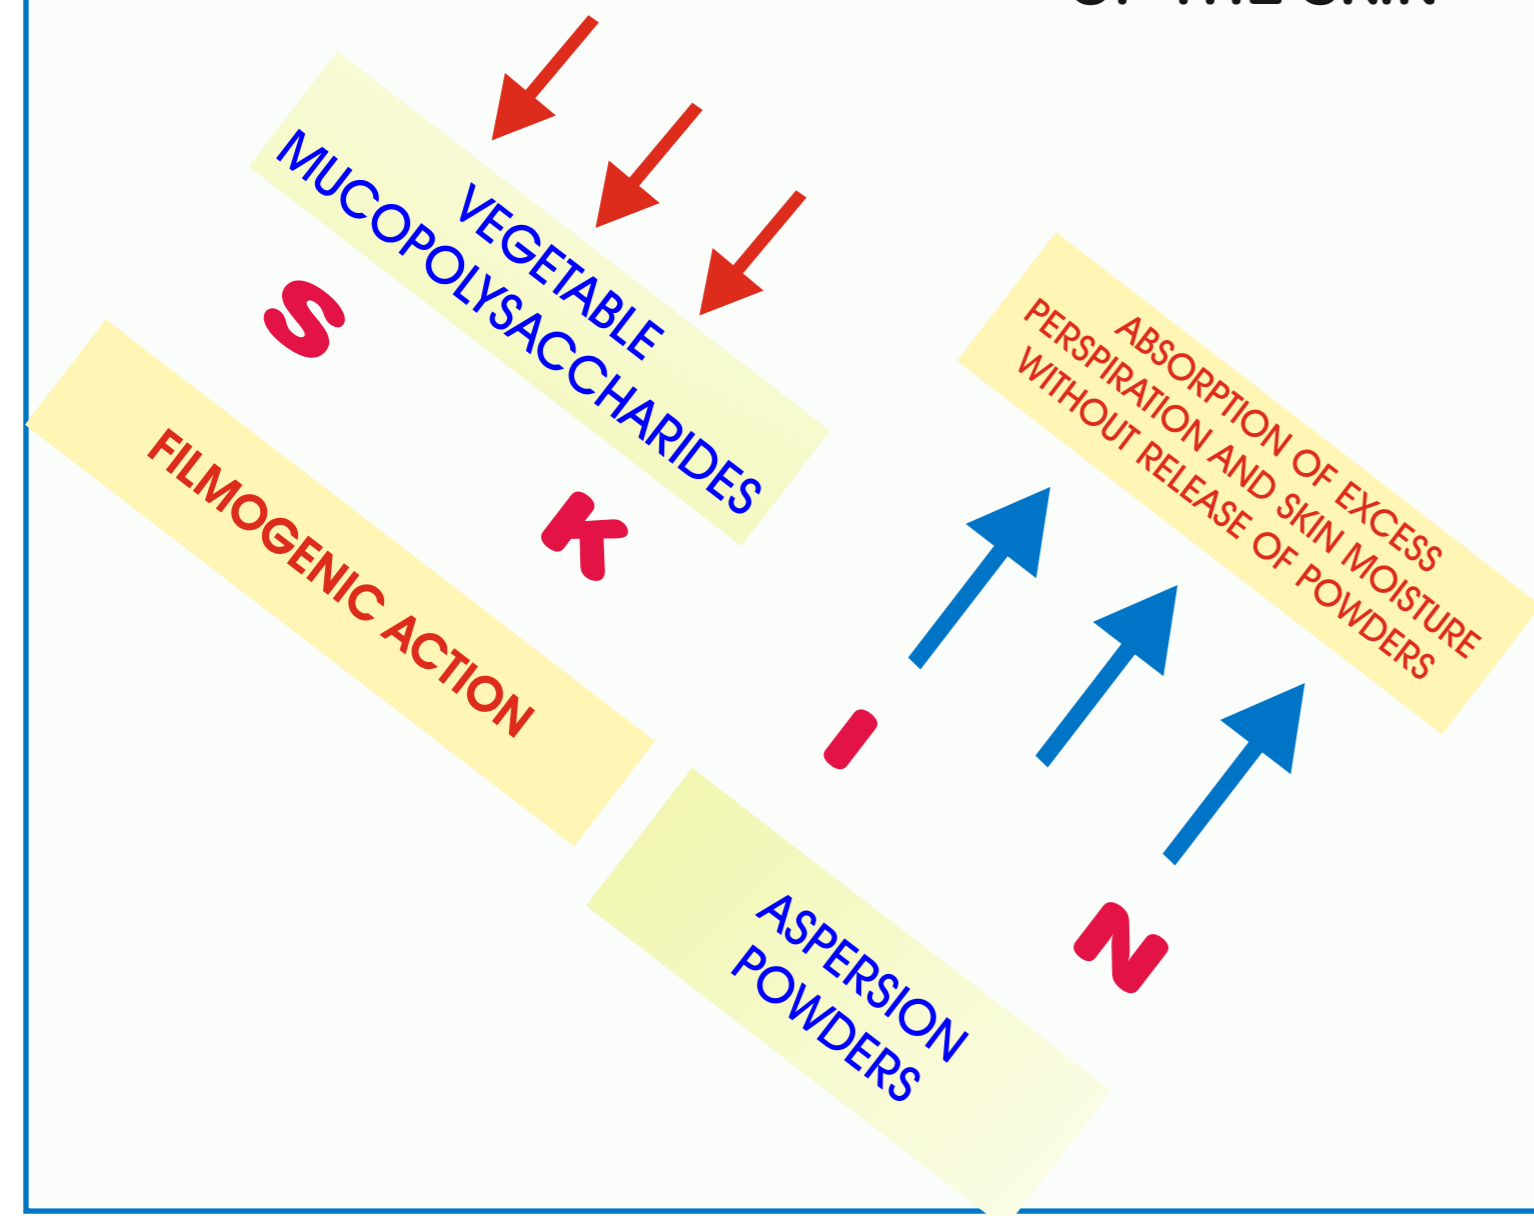

LENIDERMINA

liquid powder

the targeted prevention

Mixture of aspersions powders (zinc oxide, corn starch and talc) added in a fluid gel with soothing vegetable extracts (aloe, calendula) and n-lauryl-lysine for attachment on the skin of the powders. It's employed as the normal dry powders, but without inhalation risk. The presence, besides, of vegetable mucopolysaccharides creates a barrier effect on the skin against the external irritant substances, controlling the cutaneous perspiration.

- BODY FLUIDS
- PHYSICAL CONTACT
- REDUCTION OF THE WATER CONTENT OF THE SKIN

LENIDERMINA

cream

a shield against the cutaneous insults

Hortodermic cream containing lipacides, enoxolone phytosome, vitamin A palmitate, clorexidine and hydration complex for the treatment of skin rashes, skin wheals and irritations due to external factors (chemical, biological and/or physical). Excellent for adults (small burn also by sun, contact with body fluids and/or chemicals, insect bites, ect.) and babies (same applications of the adult and diaper rash)

- SUN
- CHEMICAL AND BIOLOGICAL IRRITANT
- MECHANICAL AND THERMAL STRESS
