Digitec

Providing **software solutions** and developing
radiological image processing **since 1985**

presents

TIRESYA

Tiresya is **our intelligence**, **our innovative approach** to radiology. It is the pulsing heart of our software solutions. Tiresya represents our **expertise**, **knowledge** and our **outlook** on the future. It holds our know-how, our experience in the field, as well as the most innovative features in digital radiology and the most sophisticated **AI algorithms**.

Tiresya is the core of our products

▪ ERACLE | ▪ ODIS | ▪ TESEO | ▪ ARGO | ▪ KADMO

TESEO

DIGITAL RADIOGRAPHY ACQUISITION SOFTWARE

—

"
Part human, part divinity. With Teseo we celebrate humankind and his ability to face seemingly impossible challenges, that can be overcome thanks to ingenuity and knowledge sharing.
Digital radiography
## acquisition software

Intended use:

STATIONARY SYSTEM   MOBILE SYSTEM   TABLET

The **advantages**
of all time

WORKSTATION CONSOLE

We supply medical and consumer PCs already configured with our software. We prioritize Windows 10 LTSC, Cybersecurity and GDPR

MULTI DETECTOR SYSTEM

Compatible with over thirty static and dynamic detectors on the market

X-RAY DEVICES INTEGRATION

Generators, accessories and 3rd party systems

SMART USABILITY

User-friendly interface, touch oriented, multi resolution format, multi language support, customizable UI

DICOM 3.0 COMPLIANCE

Store, Print, Worklist, MPPS, CD/DVD/USB, Dose SR, Query/Retrive, Storage Commitment

**PROPRIETARY ADVANCED PROCESSING ALGORITHMS**
FOR IMAGE QUALITY

Anatomical Artificial Intelligence, Super Zoom, Bone Suppression, Dual Energy, Software Grid, Tomosynthesis, Stitching
Our strength is in detail

STITCHING

Stitches automatically a series of exposures into
a full optimized body image

DUAL ENERGY

Allows to separate soft tissue and bones in different images obtained
from double chest x-ray exposure

DUAL ENERGY → Different levels of energy 60 and 120KV between 200 ms → **SOFT** IMAGE / **BONE** IMAGE

SOFT IMAGE
soft tissue component

BONE IMAGE
the hard tissue component

TOMOSYNTHESIS

Allows the visualization of internal slices, using partial 3D reconstruction
of the acquired low dose projections

X RAY TUBES

SLICED IMAGES

SOFTWARE GRID

Estimates and removes scatter from images acquired
without physical grid enhancing contrast

WITH SOFTWARE GRID → → WITHOUT SOFTWARE GRID → →

Image **WITHOUT**
Software Grid

Image **WITH**
Software Grid

Intelligent **algorithms**

ANATOMICAL ARTIFICIAL INTELLIGENCE

Classifies image regions into anatomical parts, shutters, direct irradiations and metal objects

Anatomical R-evolution
AI improves image quality through automatic anatomical area recognition
Anatomical W/L
AI evolves fixed preset ROI into anatomical ROI

Anatomical Exposure Index
AI improves the detector dose estimation within the anatomical region (excluding shutters, direct irradiations and metal objects)
BONE SUPPRESSION

AI automatically removes bones from single shot chest x-ray images

SUPER ZOOM

AI increases the sharpness of the details within the zoomed image area

TIRESYA is a concept, a work method, a philosophy. What does this mean in real terms?

- A single interface for all Digitec software
- User-friendly interface
- Touch-oriented mode
- High quality images

- Automatic image processing
- Easy reading of the images
- Reduced radiation dose for the patient
- Easier diagnoses

Tiresya is the core of our products

All of Tiresya's properties and functions are applied across the entire range of our products, thus extending our know-how to all the application sectors in which we operate: human, dental and veterinary.
