# sedaGOLA

BALSAMIC *dog*

**Respiratory decongestant**

## **NATURAL - SAFE - IMMEDIATE RELIEF**

- **Decongestant for the respiratory system**
- **Soothing effect on dry and wet cough**
- **Sedagola relieves local irritations**
- **Barrier effect: upper respiratory tract protection from irritants and infectious agents**
- **It facilitates the expectoration of catarrh**
- **Containing plant extracts with balsamic, soothing and antibacterial properties**
- **Dyes-free and preservative-free**

**sedaGOLA** is a complementary feed for dogs, plant-based specific natural ingredients to decongest the upper respiratory tract and to alleviate symptoms, such as cough and irritation, in a natural and effective way. Useful to prevent the problem at any time or when this is already present, on its own or in addition to other treatments.

## ● INFORMATION - Cough, pharyngitis, laryngitis and tracheitis

The respiratory tract disorders are very common in dogs, both adults and puppies. There are several causes including bacterial and viral infectious agents, inflammations due to trauma (even from collars), reduced immunity, but also irritants, allergens, stress, temperature changes or poor sanitation. Coughing is a natural phenomenon, but it can be very annoying if intense and protracted. Its causes can include very serious problems, therefore a veterinary check is always required in case of persistent cough. The cough can be accompanied with irritation of the upper respiratory tract and then from laryngitis, pharyngitis or tracheitis.

### Kennel cough or infectious tracheobronchitis

It is a very common, multifactorial and highly contagious respiratory disease in dogs, it can be caused by many infectious agents, both viral (adenovirus, reovirus, herpes virus, etc.) and bacteria (*Bordetella spp.*, but also *Klebsiella spp.*, mycoplasmas, etc.), as well as predisposing external agents (stress, overcrowding, thermal shock, powders, etc.). Infectious agents can be transmitted from one animal to another through the air, then the transmission is more frequent in crowded places such as kennels, exhibitions, dog lover events and parks for dogs. It usually is not a serious illness, but it causes a strong stress to the dog and irritations of the upper respiratory tract with deep and strong cough, retching, sometimes sneezing, puffs and difficulty breathing.

Analytical values		
Polysorbate 80	E433	12.600 mg/kg
Potassium sorbate	E202	4.000 mg/kg
Xanthan gum	E415	3.000 mg/kg
Citric acid	E330	300 mg/kg

**MENTHA ARVENSIS** <sup>\*1</sup>  
purifying and decongesting properties for the upper respiratory tract.

**EUCALYPTUS GLOBULUS** <sup>\*1</sup>  
balsamic, fluidifying and expectorant properties.

**THYMUS SERPYLLUM** <sup>\*1</sup>  
sedative and disinfecting properties.

#### HOW TO USE:

Administer sedaGOLA directly into the mouth as it is, or dissolve in warm water and mix with the feed.

Small size: 1/2 -1 teaspoon twice a day

Medium size: 2 teaspoons once/twice a day

Big size: 1 tablespoon twice a day

(1 teaspoon corresponds to 2,5 mL - 1 tablespoon corresponds to 7 mL)

#### COMPOSITION:

Aqua, Glucose, Polysorbate 80, *Thymus vulgaris*, Potassium Sorbate, Xanthan gum, *Eucalyptus globulus*, *Mentha arvensis*, Sodium chloride, Citric acid, *Olea europaea*, *Melaleuca alternifolia*, Strawberry.

Store in a cool and dry place avoiding direct sunlight and heat sources.
