IoT – SUM:
Security Update and Monitoring

A new feature of IoT Secure Suite®
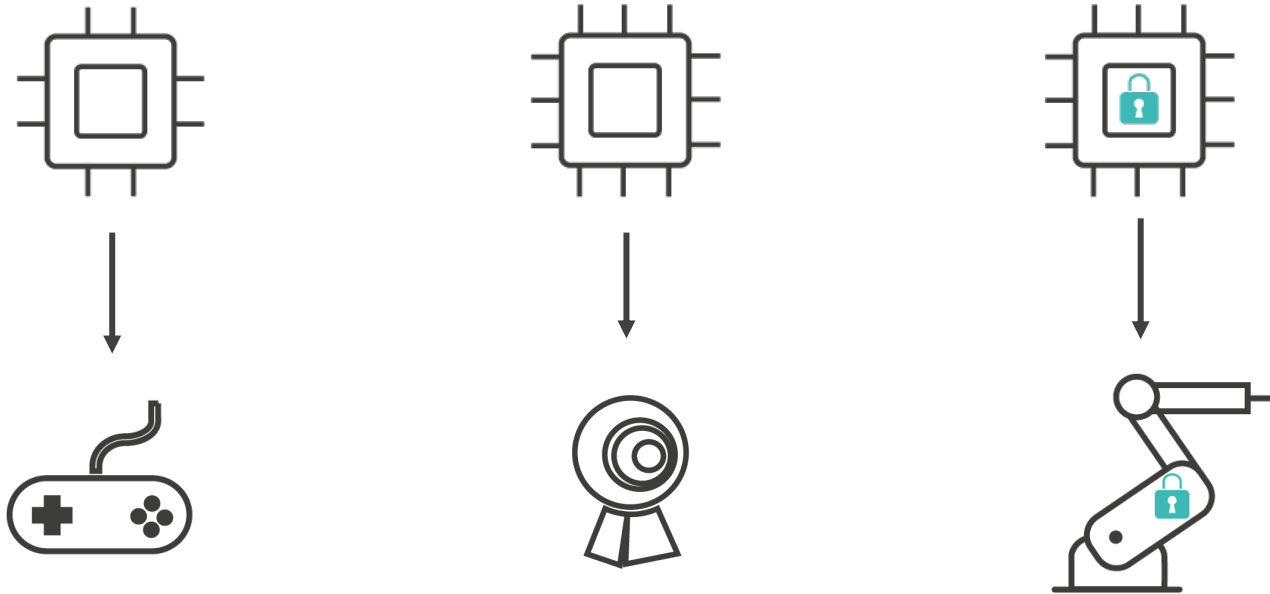

- IoT devices are GREAT, and continuous firmware development make them constantly up-to date
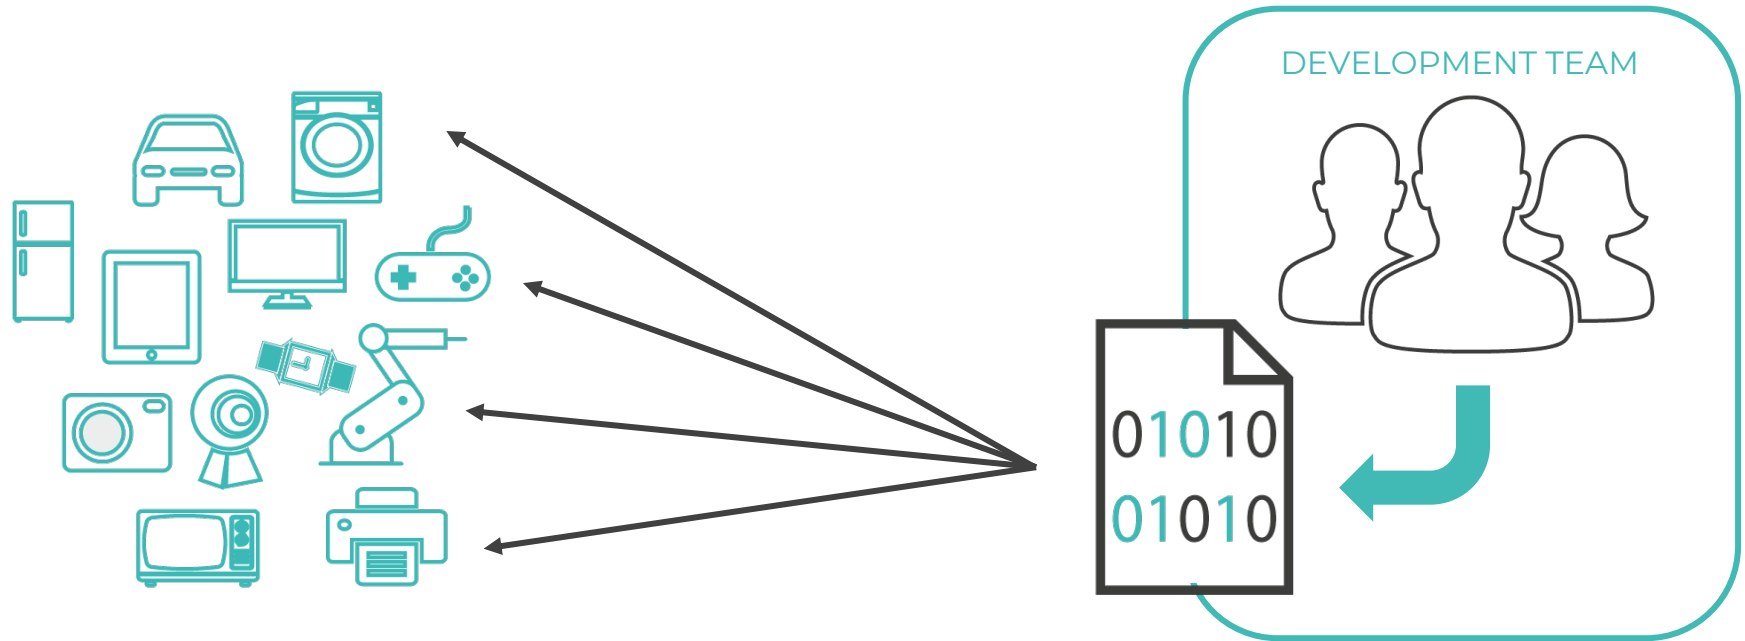

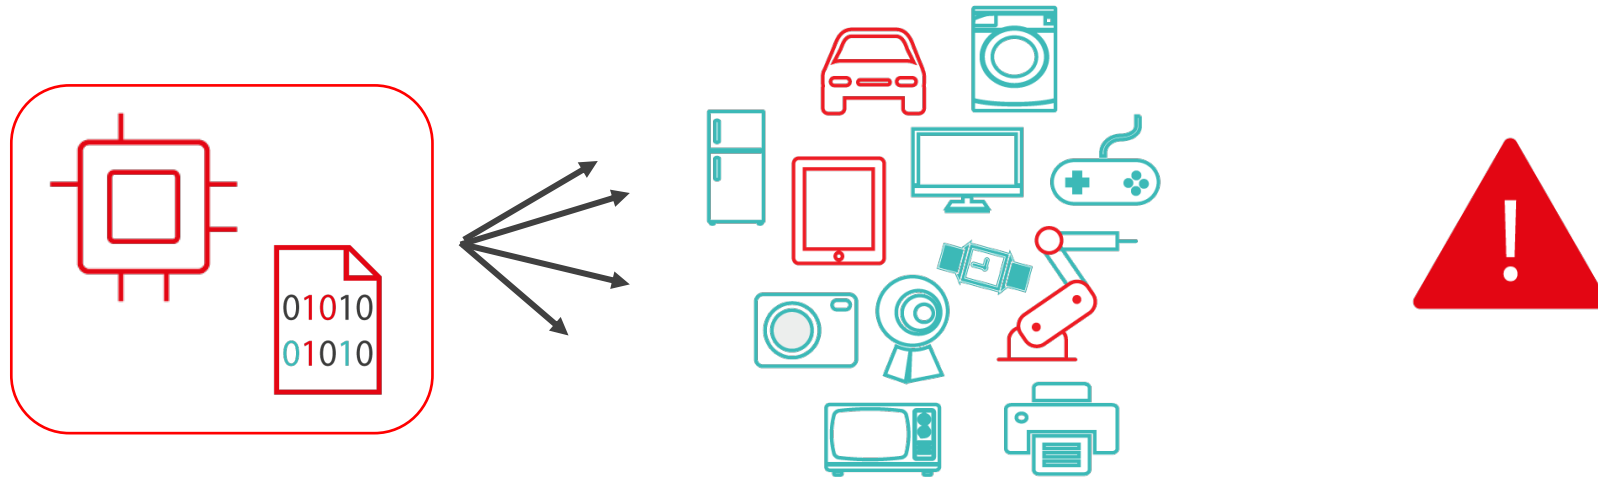

- Silicon producers make GREAT components for IoT, keeping them constantly up-to date

Component updates and vulnerabilities

- Monitoring component updates and vulnerability notifications can be somehow complex

- That's why we released **IoT - SUM**:
  IoT - SUM (**S**ecurity **U**pdate and **M**onitoring) is a sum of tools for the monitoring of component's security update and for the management of vulnerability notifications
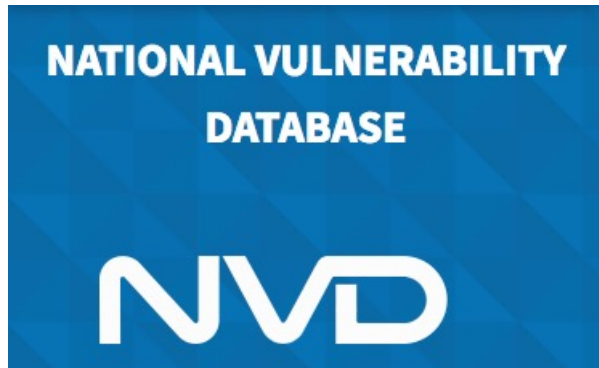

Easy monitoring with IoT - SUM

- IoT-SUM allows an easy monitoring of all the emerging vulnerabilities of every component of your IoT device

- What we care about:
  - 1. Continuous monitoring on NVD, CVE and release notes on SW stack and system components
  - 2. Customer care oriented vulnerability notification service

- We can also provide support for vulnerability mitigation strategies

SECURITY PATTERN

Thank you!
