Values

Quality

For two generations now, the Giorgino family, assisted by highly qualified, experienced and up-to-date executives, managers, technicians and workers, has been committed to pursuing the objectives of IGIEMME, guaranteeing real value to its customers, in the creation of exclusive cardboard packaging, innovative and high quality, efficiently and reliably.

Efficiency

In addition to a protective function, Packaging plays a fundamental role in positioning a product on the market. We are aware of our responsibility and for this reason, we offer our customers personalized advice in the choice of shapes, materials, inks and / or paints, and much more.

Experience and Reliability

From the creation of the prototype to production, our specialized technicians, with proven experience in the paper industry, monitor each process and analyze the aesthetic, functional and structural requirements in order to "tailor-made" the best packaging for our customers, treating their data with extreme care, ensuring privacy, security and reliability.

Speed

Being attentive to the customer also depends on the speed with which the orders received are fulfilled. To achieve this, a perfect and time-tested organization is naturally required, as well as experienced and reliable collaborators.

This approach is valid for any project you want to carry out and it is therefore necessary to have specific **planning, programming, organization and control rules.**

Disponibilità

Siamo pronti a far fronte anche agli **imprevisti** che si configurano come **problemi da risolvere**, attraverso **risposte tempestive e su misura.**

Availability

Urgency is often not calculated, we know. It often originates from mostly unexpected events. To meet this need, we have grasped the importance of offering flexible services, because unforeseen events do not know hours or holidays.

We are ready to face even the **unforeseen problems** that need to **be solved, through timely and tailor-made responses.**

Processing Technologies

Offset printing
Silkscreen printing
Lamination
Die cutting
Coupling
Hot stamping
Embossed
ReliefBrail print
3 Ennobling
Cast gold
Digital UV printing

Planning and Design

Igimme's research and development laboratory was born from the attention to the quality of the printed product and through the perfect combination of design and innovation. A laboratory that aims to integrate the material world of paper and cardboard with the immaterial world of creativity.

A **creative hub** where the different expressive possibilities of paper material are experimented and verified, with the aim of accompanying customers in product **development, optimizing production and costs.**

Raw material

The procurement of the best raw materials represents the starting point for the creation of good packaging.

We guarantee our customers **sustainability** and **safety**, through selected and responsible raw materials, in compliance with quality standards, **to certify the ISO 9001 certifications, ISO 14001 e FSC.**

Sustainability

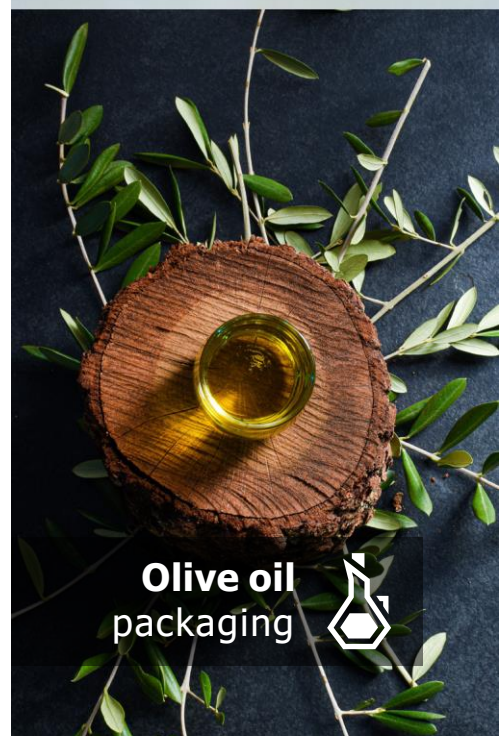

We pay great attention to the environmental impact of the processing cycle of our packaging, and we are committed to ensuring that our activities do not adversely affect the natural balance.

Cardboard is a **flexible** material that can be **adapted** to any **storage** and mostly 100% degradable. Where possible, we use natural adhesives and limit the production of waste to the essentials and promote its recycling.

The company has also invested, on an energy efficiency plan, contemplating the installation of a photovoltaic system, to produce clean energy independently.
