

## SIX EXHIBITIONS

The core axis of BFWWE consists of the six exhibitions currently held by the company. Six initiatives ranging from water to hydrogen, passing through methane, LNG and the refueling station of the future, naturally contemplating electric and other alternative fuels, present BFWWE as a candidate to become the Italian reference point on these topics and related sustainable mobility.

Furthermore, BFWWE is the reference exhibition for the market on the technological applications of drones.

[ACCADUEO](#), for over 30 years, has been the reference exhibition event for the Italian and International water service industry.

Since 2022, the biennial international water exhibition alternates with the ACCADUEO FORUM, a conference event dedicated to digitalization and innovation in the sector.

[ConferenzaGNL](#) was launched in 2012 to promote liquefied natural gas for the energy transition and emission reduction in transport both in Italy and the Mediterranean.

The reference trade fair event for the LNG sector, it highlights the issues of greatest interest for the entire supply chain. During the annual workshops, it analyses the different fields of application of the commodity without forgetting to give space to the evolution of the sector and its new challenges. One above all, the transition and future potential of bio-LNG.

[HESE - Hydrogen Energy Summit&Expo](#) is the main Italian initiative dedicated to new technologies for the production, transport and storage of hydrogen.

During HESE, representatives of the industrial community, as well as institutions and associations, discuss the new development directions of an energy industry that will play an important role in the near future.

[CH4](#), until last year part of ACCADUEO, is the trade fair dedicated to technologies and systems for the transport and distribution of gas which, from 2022, will evolve and open up to topics related to the use of methane in mobility.

[Fuels Mobility](#) is the annual event where institutions, associations and companies converge to design together the service station of the future, no longer just petrol stations but real multi-energy and multi-service retailers.

An initiative to give voice to a sector attentive to constantly evolving market trends.

[Dronitaly](#) was created in 2014 and is the reference event for civil drones for professional use in Italy.

Through the years, it has closely followed developments in the sector between innovation and regulatory issues. The event is characterized by a lively debate between sector companies, associations and key stakeholders held during a series of thematic workshops.
