

COLOUR EXPERTS, ENVIRONMENTALLY FRIENDLY

**DECIA CAMP**

Colorificio Valdecia is a company specialized in the customised production of **paints and varnishes** for the maintenance and insulation of exteriors, for the protection and decoration of interiors, paints specific for wood and iron, adhesives and stuccos. The company is active in the civil and industrial construction sector, and specialised in the agricultural and sports sector.

**The history** - The company was founded in 1997 when Claudio Gelpi, an experienced construction painter and decorator, manages to create a line of "customisable" paint and varnishes, which immediately meet the favour of the market.

Ten years after its birth, the company developed **Decia Paint Color System**, an innovative tintometric system with spectrophotometer which allows to recreate any shade requested in a short time. Research, development and production enhancement are Claudio's keywords: in those years, further improvements were made both to the water paint production department with the purchase of a new machine, and to the powder line with the addition of a new automatic bagging machine with palletising robot.

In 2011 the facility expands and they start to expand their plant, increasing the spaces destined to the stock of raw materials and the finished products. The process of the development of the premises continues until 2014, with the complete refurbishment of the establishment used as a point of sale. The factory of via Santa Rita da Cascia, Rogno (Bergamo) becomes, in a short period of time, one of the protagonists of the sector throughout the national territory.

**The business model** - The company, ISO 9001: 2015 certified, is the owner of a patent for their shading agent Decia Cover, which received the Seal of Excellence of the European Union as well. The production is characterised by the high attention to sustainability and the respect of the environment.

Transparency, traceability, quality, development and research, product customization and after-sales assistance are the values of Colorificio Valdecia, a company that, thanks to a flexible organization and professional resources with specific skills, pays great attention to the relationship with its interlocutors and enjoys an excellent reputation in its market.

**Decia Camp** is a line marking paint for synthetic and natural grass fields. This paint allows you to draw white lines (or coloured on request) on any type of turf. It is a product designed to have characteristics of adhesion, high visibility, excellent whiteness and coverage. In addition to paints, Colorificio Valdecia has created a line marking machine, which can be used with all Decia Camp spray products.

#### Products

##### DECIA CAMP C 40

Ready to use sprayed paint for natural grass playgrounds. C40 has very high brightness (especially with artificial light).
