

STONE PICKER

“DUPLEX” stone picker is a multi-purpose agricultural machine developed to reclaim effectively any type of land. Stones are collected by the machine while the tractor moves forward; as an alternative it can act as a rear netting bin by going to reverse. This machine is suitable for tractors provided with power range from 40 HP upwards. The frame, once the connections have been made, ensures the masses distribution so as to prevent the tractor from getting stuck or sliding during working by guaranteeing not only maximum grip on the ground and minimum traction stress, but also a fuel consumption significant reduction; during driving the weights excellent balance does not affect the tractor bar, so it guarantees a constant and perfect grip on the ground. The multi-purpose working system ensures the stones collection both in forward facing position, by moving forward the bucket, and in reverse, by using the machine as a rear netting bin. The bucket is provided with a hydraulic overturning system.

	Power	Tines clear	Work width	Minimum space	Weight
DUPLEX-1200	40	7	120	180	510
DUPLEX-1400	50	7	140	200	540
DUPLEX-1600	60	7	160	220	570
