

RECHARGING AND MAINTENANCE STANDS

The stations are designed to support all cyclists, allowing them to perform **quick bike maintenance**, inflate tires, and in the electric version, recharge e-bikes.

The structure is made of **Anticorodal aluminum**, ideal for outdoor use, **lightweight yet robust**. The bicycle is lifted and placed on the designated support arm under the saddle, keeping it suspended for **easy maintenance** of any part using tools secured to the structure with appropriately sized **steel cables**. The tools are of excellent quality and specifically designed for bicycles. In the PLUS version, the tools are attached to retractable cables, making them more convenient and organized to use.

The station also includes a high-quality pump, entirely **made by BIKE FACILITIES**, compatible with all types of valves on the market and capable of inflating tires **up to 8 bar**. The pump features a glycerin-filled pressure gauge, which prevents condensation and ensures a clear reading of tire pressure at all times.

ON SITE INSTALLATION EXAMPLES

Today, **Bike Facilities** boasts over 1,000 installations in Italy alone: in **public spaces** (squares, bike paths, trails, schools, universities, etc.), in companies promoting “**Bike to Work**” program, on **bike-friendly** accommodations such as hotels, bike cafes, B&Bs, mountain lodges, shopping centers and at private properties.

BIKE TO WORK CONCEPT

Recharging and maintenance stands at workplaces ensure reliable commutes, reduce downtime, and promote a healthy, eco-friendly workforce.

BIKE HOTELS

For owners, these bike stands increase guest satisfaction, differentiate the property, and encourage longer stays, boosting revenue.

CYCLING PATHS

Installing recharging and maintenance stands on cycling paths ensures convenient, continuous rides and promotes eco-friendly commuting.

COUNTRY SIDE ROUTES

The BIKE FACILITIES stands also enhance safety, attract more cyclists, and boost local tourism by making rural areas more accessible.
