Direct Dashboard

Overview

The **Direct Dashboard** system is the new software solution for statistical analysis of field data engineered by Loginet.

The application, based on modern Business Intelligence (BI) technologies and Extraction, Transformation & Loading (ETL) processes and equipped with its own database, offers complete analytical functions, with particular attention to data visualization and innovative tools for the creation of targeted and aggregated research on operational data in a simple, graphic and intuitive way.

Display of data grouped by different types of graphs

Generation of reports and export of data in different formats

Alert management and control of events based of threshold and set points.

Features

- Multiplatform, accessible from tablets and smartphones;

- Interactive GUI;

- User profiling in relation to authorized functionalities;

- Data acquisition through secure communication protocols (Web Services REST) and authentication systems (Header Basic);

- Possibility to acquire data on the basis of configurable filters;

- Automatic transformation and standardization processes of the acquired data;

- Possibility to visualize the Nuovo Petrol Synoptic pages of the various systems in order to have a real-time view of the systems.
