Tecnorivest è un'azienda a conduzione familiare, fondata nel 1993 e specializzata nella produzione di profili rivestiti in legno, di alta e costante qualità: l'utilizzo di materie prime scelte da fornitori selezionati nel tempo e di impianti tecnologicamente all'avanguardia, ci consentono di essere sempre innovativi, nei prodotti e nelle finiture.

A differenziarci da altri produttori, anche la ns. scelta di rivestire i profili con un unico foglio di tranciato, in modo che non presentino nessuna antiestetica giuntura del piallaccio, ma solo le naturali venature che la bellezza del legno ci offre.

L'azienda si avvale di cicli produttivi che le consentono di essere flessibile e competitiva. La ns. gamma di profili per interni spazia dai battiscopa, nostro prodotto di punta, ai profili per porte: stipiti e mostrine, fermavetro, paraspigoli, angolari, cornici, ognuno dei quali è disponibile in molte dimensioni ed essenze.

Il consistente magazzino di **profili in pronta consegna** risponde con snellezza e celerità ad un mercato in continua trasformazione: la gamma di profili disponibili è vasta e costantemente aggiornata, **le consegne sono rapide**, anche per piccoli quantitativi.

A fianco di una ampia gamma di prodotti standard, possiamo produrre **profili personalizzati**, su disegno tecnico del cliente. I prodotti vengono interamente realizzati nei ns. stabilimenti; ciò ci permette di garantire la qualità, di realizzare profili e finiture speciali su richiesta e di consegnare in tempi certi.

Tecnorivest is a family owned company, established in 1993 and specialized in manufacturing high quality wooden veneered profiles: the use of selected raw materials from long terms suppliers and manufacturing facilities in the forefront of technology, enable us to be always innovatory either for profiles and for finishing. **Tecnorivest is different from others, also for his choice to cover profiles with a sole slice of veneer, so that their surface will not show any unaesthetic joint but only the beautiful natural wood grains.**

The choice to have best performing working cycles, allows us to be most flexible and competitive. Our range of profiles for interiors includes skirting boards, our top product and profiles for doors: casings and doorjambs, glass strips, edge protectors, angle bars, frames: each one is available in many dimensions and veneers.

The warehouse for **profiles ready in stock** is working at its full potential to be agile and quick in satisfying a continuously evolving market: the range of available products is wide and constantly updated, **deliveries are quick**, even for small quantities.

In addition to a wide range of standard products, we can manufacture **personalized profiles**, based on a technical drawing from our customer.

All products are entirely manufactured in our factory: this enables us to ensure high quality, to make either profiles and special finishing on customer's request and to offer certainty in delivery time.

Verniciatura all'Acqua . Water - based Coat

La consapevolezza che garantire elevati livelli qualitativi oggi significa offrire prodotti ecocompatibili e sicuri per l'ambiente e la salute della persona, ha indirizzato la Tecnorinvest all'utilizzo di tecnologie che soddisfino tali requisiti.

Pioniera nel settore, la Tecnorinvest sceglie impianti tecnologici adatti alla verniciatura ad acqua UV per tutti i profili della sua gamma.

Questo innovativo tipo di lavorazione utilizza solo vernici a basso impatto ambientale.

I ns. profili sono infatti destinati ad ambienti chiusi e se verniciati in modo tradizionale, possono generare fastidiosi odori.

Nondimeno, la vernice all'acqua consente una completa flessibilità di applicazioni: possiamo infatti realizzare finiture trasparenti o tonalizzate, che spaziano dal caratteristico "effetto oliato" fino al brillante, sempre in linea con le tendenze del mercato.

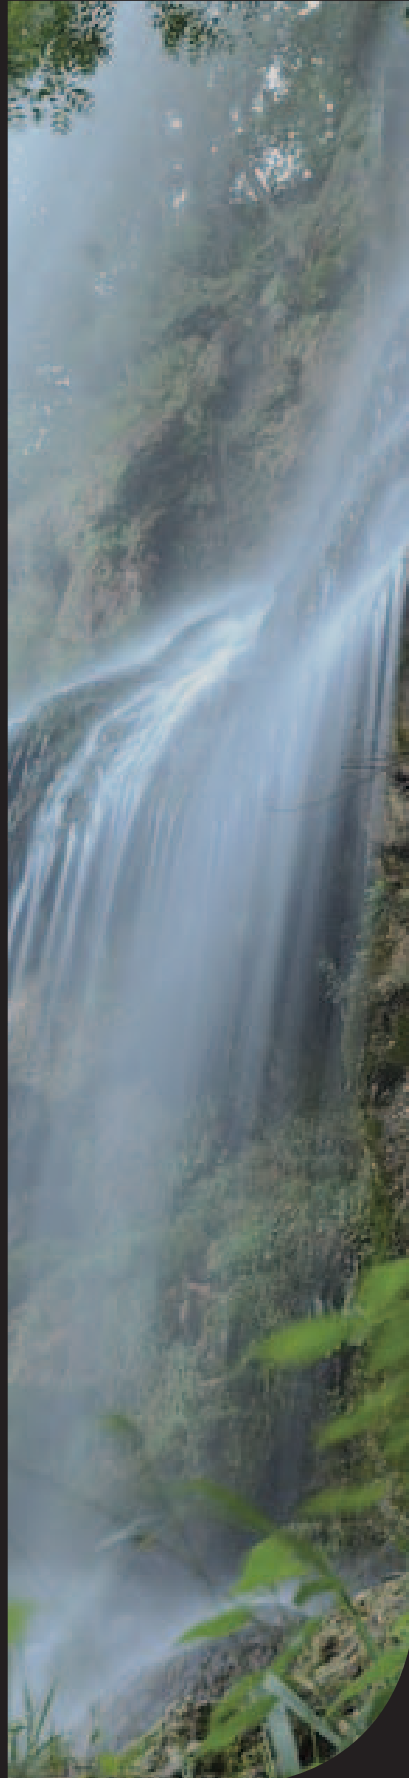

Tecnorinvest is aware that offering high quality levels today means environmental friendly products, either ecological and safe for the health: with that aim, we have chosen proper technological systems.

Pioneer in our field, we were among the first to install finishing equipment suitable for a UV water based coating of all the profiles in our range.

This innovatory type of finishing makes use of low environmental impact paints only.

In fact, our profiles are intended for interiors and if varnished with traditional paints, they can generate bothersome smell.

Nevertheless, the water based coats allow the widest flexibility of applications: we can actually make clear or stained profiles finishing, which range from the "oiled" to the glossy effect, always after the latest market trends.
