IoT digitalization platform
designed for remote
monitoring and the
development of dedicated
services for industrial
machinery.

A single solution designed for:

- **OEMs**
- **System Integrators**
- **Distributors**
- **Rental Companies**
- **End Users**

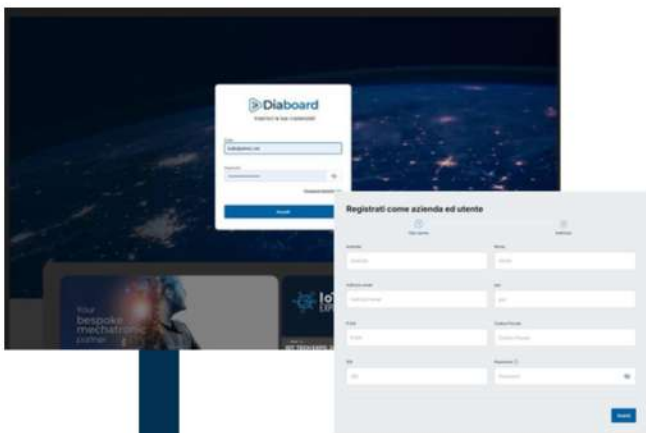

Each stakeholder connects directly to the platform independently, accessing services and customizations tailored to their specific needs.

EU Cybersecurity Standard
EN 18031

How It Works

1. Registration

Go to **www.diaboard.net** and complete the registration.

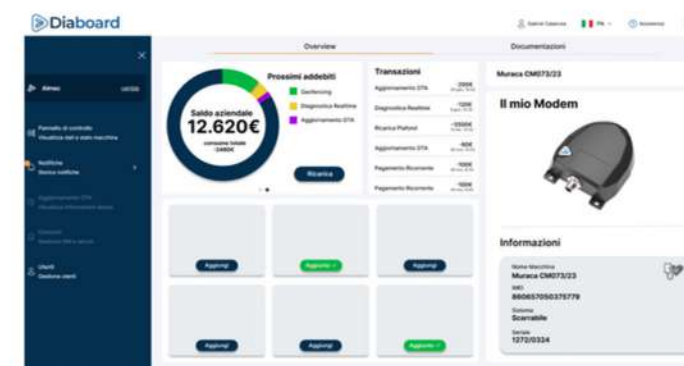

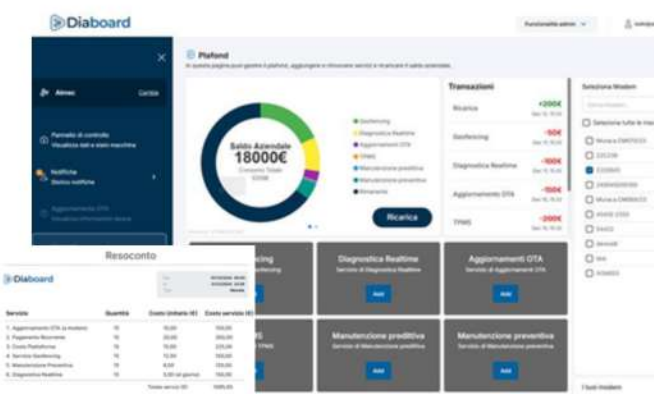

2. Add Machine

Bring your smartphone close to the gateway and follow the steps to **share the machine**.

4. Consumption Monitoring

You will be able to access your **consumption statement** at any time and download detailed documents.

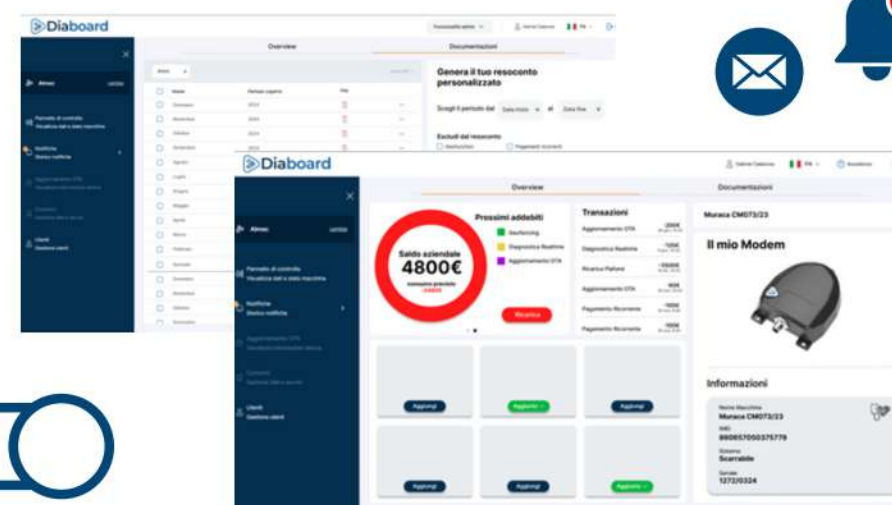

3. Account Credit Upload

Top up your credit using the available payment methods on the platform.

5. Enable Services

Within your operational area, you can **activate, deactivate, and automate the available services**.

6. Use Diaboard

- ✓ Services Included in the Basic Subscription
- ✓ Automatic Monthly Billing
- ✓ Detailed Consumption Reports and Customizable Notifications

With Diaboard you can

Role-based access control for each operator and activity tracking

Monitoring of machine parameters and customized workset.

Management of machine configurations and variants.

After-sales service management, including maintenance and OTA updates.

Geo-functions and fleet management.

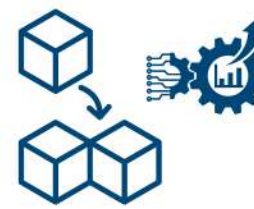

Basic and advanced diagnostics with customizable reporting.

Unlock **digital transformation** for your machines — new or existing — by making them “smart” and remotely controllable from your smartphone.

Unlock the **value of data** — collected, processed, and transformed into insight — and take full advantage of **secure connectivity** with a system compliant with European cybersecurity standards.

Gain access to a **modular, scalable architecture** that allows fast integration of services and applications — enhancing your product’s competitiveness in the market.

Seamlessly integrate your machine with ERP, MES, WMS, and other software platforms using **open APIs**.
