

From 1977, our company is specialised in the field of leather and fabric coats and jackets. We are clever in combining leather and nylon in quilted jackets, jersey in clothes and knitting etc.. Starting from the drawings, the prototypes and up to the sample delivered to our customers, we deal the whole research concerning the leather, the manufacturing processes and techniques. We are clever in doubling and automatic cutting combined to the colouring of the edges to achieve high precise and high quality products. We cut and produce printed clothes of every sort of drawing thanks to the plotter system where fabrics are photographed, the positioning is made manually and the automatic cutting lets every drawing coincide in the construction phase.

Our customers include Gianni Versace for quilted jackets in fabric (male and female collection), Balenciaga for fabric and nylon modes, Alexander McQueen for fabric and leather models, Balmain for vinyl and fabric models, Moorer for leather quilted jackets or mixed fabric and sheepskin, Fabiana Filippi and Piazza Sempione for coats, jackets and trousers in leather or suede, Ralph Lauren for the knitting and leather combination, etc..

In the last years, we have begun to produce also quilted jackets in jeans for Moorer and jackets and trousers in jeans for Fabiana Filippi and other customers. We have a specific department focused on this typology of products.

The headquarter is based in Breganze, province of Vicenza, where, from the prototype up to the final production, we guarantee a Made in Italy standard. For other brand we have also the possibility to deal the production abroad, depending on the price. Here below some photos of our product.
