MONTE BIANCO

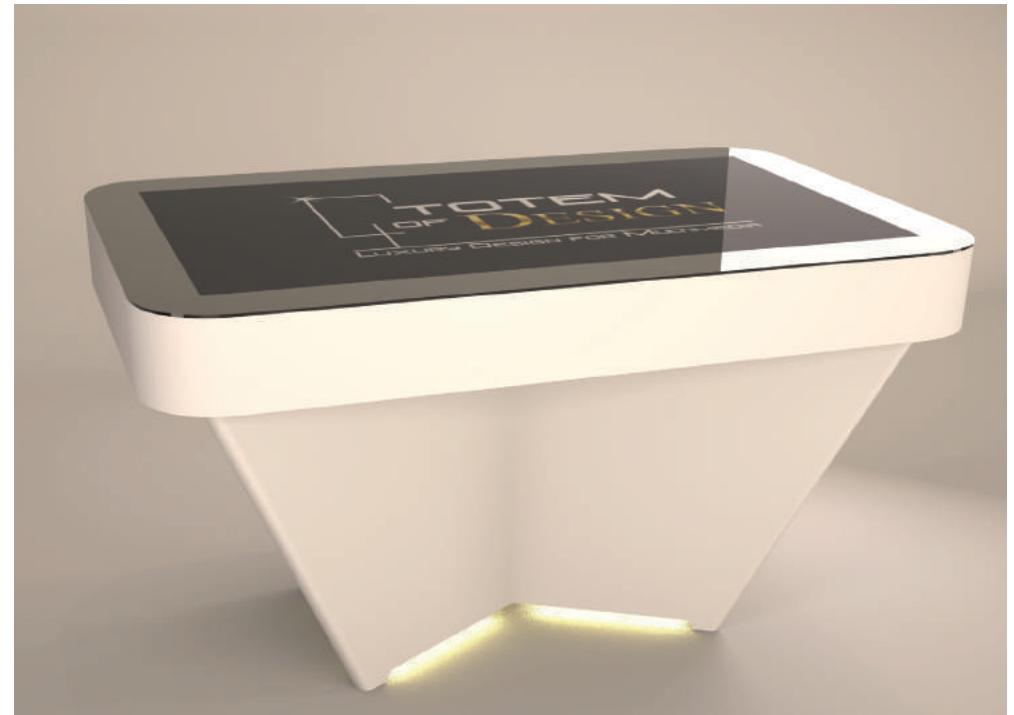

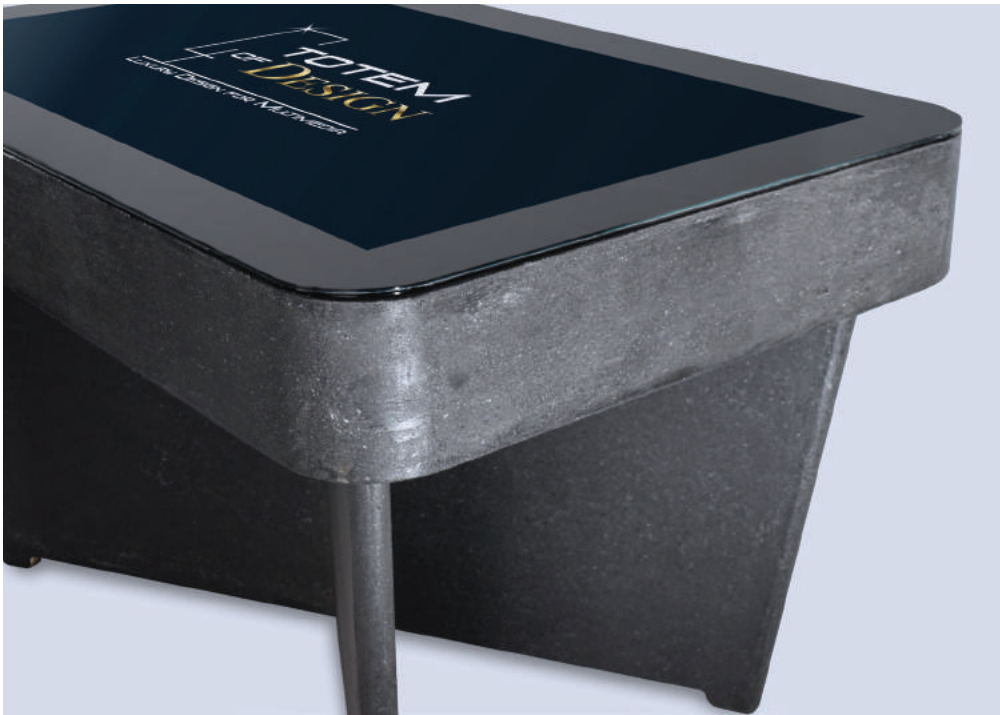

The material design essence

Monte Bianco combines visual elements with the tactile experience of unknown materials in digital technologies. Granite is shaped to take on a more ductile shape and blend with a user-sensitive touch screen.

The veins of the millennial rock come to life thanks to technology, thus uniting the past and the future in an intertwining of forms and emotions.

Simplicity and personalization

Despite its solid appearance it is not a single monolith and can be easily dismantled to make it easier to transport and install. Among the available finishes you can choose between luminescence effects, soft touch, stones, rocks, cement, metal and oxidized bronze.

The adaptability of the finishes allows you to include Monte Bianco in different types of traditional and modern environments looking for unique and out-of-the-ordinary effects.
