Who we are

ICT is able to supply both **bearings** and **cast iron parts** for the **agricultural sector**, characterized by an **excellent price/quality ratio**.

Adverse atmospheric conditions (extreme heat and cold) together with **very aggressive work environments** (mud, dust, debris, contact with corrosive chemicals) and **long periods of inactivity** alternated with **intense working periods** are all elements which cause **stress** for all the **mechanical components**.

In such situations, in order to get bearings always to behave according to customer expectations, it is important that the **materials' choice**, the **shields' and coatings' design** and the **selection of lubrication grease** and of **radial and axial clearances** are always done appropriately.

ICT engineers and their partners are able to offer **state-of-the-art technical** and **logistics solutions**.

ICT offers a range of products and services developed in order to help **OEMs** and **farmers** to meet with the growing needs of an evolving industry.

Our products offer many advantages:

- Effective **technical solutions**;
- Widespread distribution** through the network of our partners;
- Competitive prices**;
- Post-sales assistance**.

We are able to work side by side with OEMs from the early stages concerning the **machinery design**, suggesting the **most appropriate technical solutions** in order to optimize costs and maximize components' life.

We offer

- Radial and angular contact ball bearings
- Supports Y
- Needle bearings
- Spherical plain bearings (GE series)
- Spherical roller bearings
- Tapered and Cylindrical roller bearings
- Agri HUB

Agri HUB

Agri HUB bearings are an already greased and shielded solution for **agricultural machines**.

ICT is able to offer all existing models at competitive prices, starting from the popular **BAA-0004**.

The benefits of using **ICT Agri-HUB** are obvious:

- ☉ **Increased productivity** thanks to longer life;
- ☉ **Reduction in the number of components** to be managed;
- ☉ **Simplicity in assembly**;
- ☉ Shield design that allows greater **protection of the bearing**;
- ☉ A **higher contact angle** in the case of axial loads;
- ☉ **Absence of lubrication** during operation;
- ☉ **Competitive pricing**.

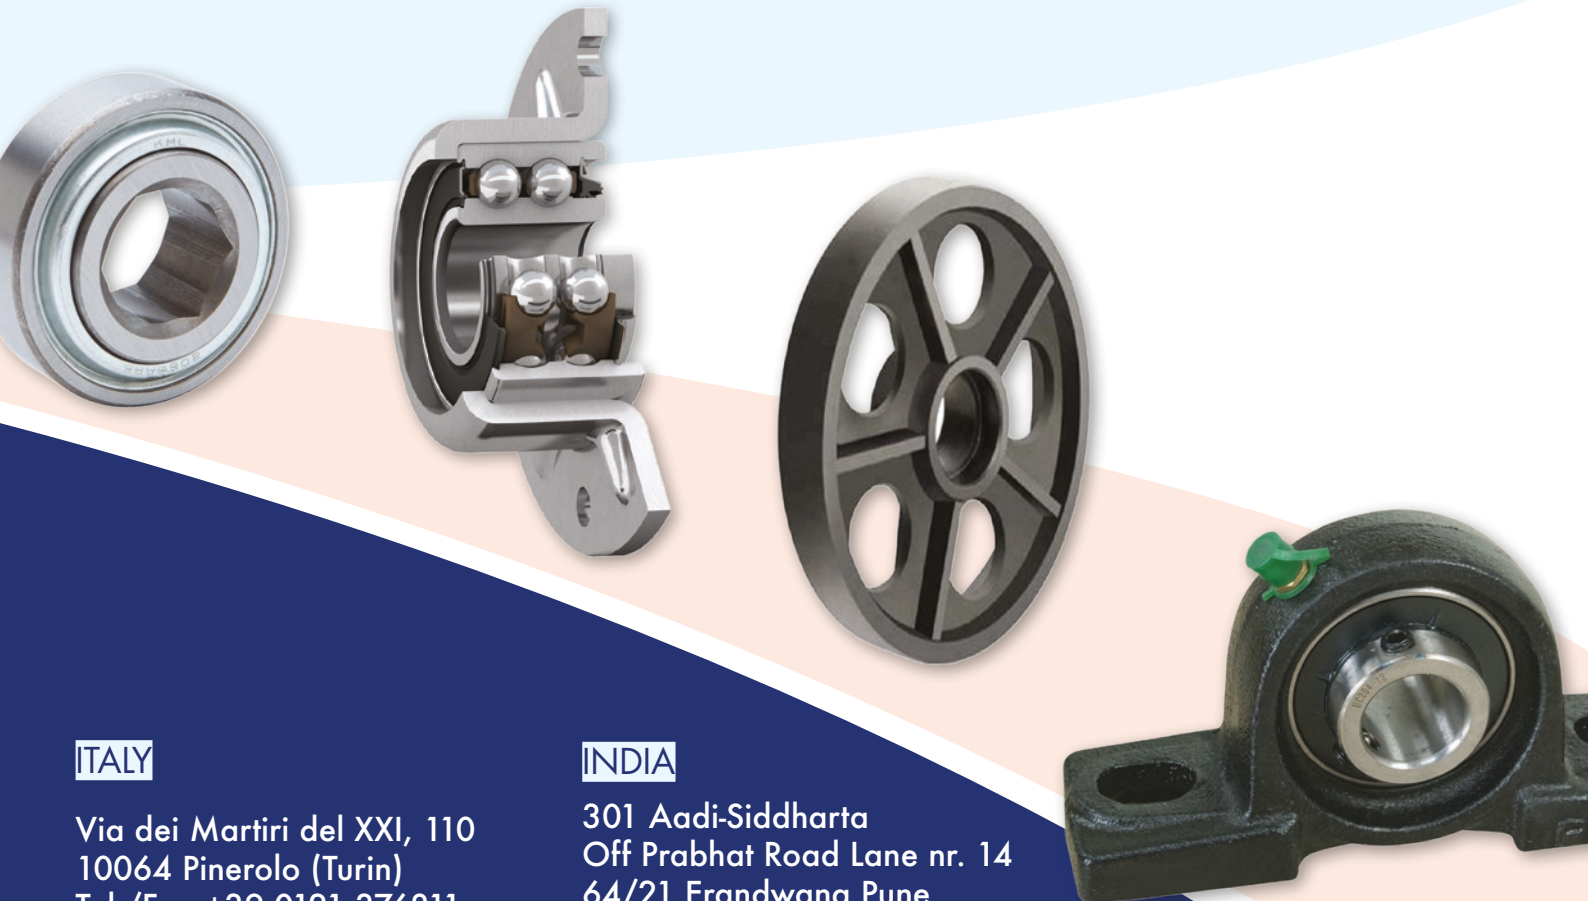

Cast iron

Through its partner **ICT** is able to offer high precision **parts in cast iron**, both for high volumes and for small batches.

The use of **lost wax castings** allows **parts** to be produced in a **wide range of dimensions** and of **iron and non-ferrous alloys**, with an exceptional dimensional accuracy.

ICT can provide cast iron products in the following materials:

- ☉ Cast iron G15, G20, G30, UNI Table 5007
- ☉ Cast iron GH130, GH170, GH190, GH210, GH230, UNI Table 5330
- ☉ Spheroidal cast iron UNI 400/2, 500/7, 600/2
- ☉ Copper cast iron, chrome, nickel and molybdenum alloys.
