THE EXCELLENCE  
BETWEEN NATURE,  
QUALITY AND  
TECHNOLOGY.

# Two lines a UNICO® Target.

Unico Wall Coping *evolution* and *elite* were born from the ability of thinking in a different way, of renewing starting from the raw materials, without being subjected to the constraints imposed by consolidated practices.

Two Lines that have revolutionized the Wall Coping System, by joining the **1 meter Length to the Joint System** and the excellent surface finishing, getting, in this way, performance levels never seen before.

# 30 YEARS OF INNOVATION...

30 Years of Experience and Know-how in the production and processing of building products let **IMER Srl** be a company strongly oriented to the product's and service's excellence, with a view to profitable relations with the National and International market. The obsessive attention to product excellence, the impulse for innovation have been the foundations and the keys that have transformed the dream of a very young entrepreneur into reality.

Sands from natural stones, marble grits: only **natural materials rigorously selected for products of high quality and aesthetic profile** able to respond to the requests and needs of an increasingly demanding and qualified market. These are the values on which Imer Srl shapes its Mission.

The high quality profile is a constant in its production, thanks to the **careful selection of local raw materials**, to the application of the most updated working and production methods that spring from 30 years of experience, to a structured organization and a qualified Team that guarantee quality and efficiency from the production departments to the commercial and distribution network.

All that establishes the competitive advantage of **IMER Srl** - ISO 9001 certified company - and guarantee production capacity, quality control and well-made products, functional and practical in terms of application and maintenance; unique products thanks to the care we put in the finishing phase.

## LAYING AND GENERAL MAINTENANCE WARNINGS

In order to guarantee a long lasting life to the wall coping we advise to carry out, after the laying, a protective treatment on all the surface with a water resistant and perspiring product, which has to be transparent. Please, clean the surface before making it and spread it evenly on all sides. Our products, due to the fact that are produced using natural aggregates, carved, from local stones, could have different shades of colours.

## GENERAL LAYING INSTRUCTIONS

**Preparation of the laying surface:** 1) clean the wall with water after having removed any kind of impurity; 2) let it dry; 3) remove carefully residual dust; 4) make sure there are no difference in level on the upper part of the wall.

**Laying:** 1) do not use classic cement mortar, in order to avoid the wall coping coming off over time; 2) use specific glues, following the manufacturer instructions; 3) keep between one wall coping and the other one a distance of about 1,5/2 mm. and use high quality wall putty following the manufacturer instructions; 4) do not use classic cement mortar as wall putty; make sure there are not less than 5 mm of air between plaster and drip; 5) Putty close to the hole around the fence post, avoiding placing more than 5 mm of putty around the fence post.

**Safety:** Adopt the safety devices and regulations in force.
