INNOVATIVE AND SUSTAINABLE LAUNDRY SOLUTIONS

Nexia NRAY 4 is a new high performance last generation laser making machine, equipped with a new high speed scanning head. Nexia NRAY 4 is a valid alternative to the traditional methods of bleaching, abrasion, decoration, marking, engraving, cutting of jeans and ready finished garments. NRay 4 respects the environment by reducing the consumption of water, chemical and toxic products during the treatments, in a more ecological way. Nexia NRAY4 increases the quality of the garments treated, with high definition of the images with very accurate

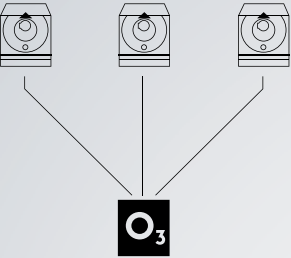

decorations and natural "used" effects. It also allows you to create new designs and patterns, to be repeated even after some time in the garments to be treated, in a very quick and economical way. Special effects can be reproduced such as customized designs, images, brands, whiskers and sandblasting effects both on ready finished garments in denim and in fabric. Nexia NRAY 4 guarantees operators a healthy working area, in a clean, dust-free working environment and a better productivity.

OZONE

Nexia Ozone Generator

All the system parameters are displayed and monitored to ensure maximum reliability and safety for all operators. Our O'zone system can be connected up to 3 machines both dry and wet . The ozone generator is complete with a catalyst to reduce 100% ozone emission into the atmosphere.

NRAY⁴

Laser marking system doble source

NRay4 is a new high performance last generation marking machine equipped with a new high speed scanning head. Special effects can be reproduced such as customized designs, images, brands, whiskers and sandblasting effects both on ready finished. Garments in denim and fabric. Nray4 works with high speed and excellents performance.

NRAY²

Laser marking system High productivity system

Welcome to high productivity and reduced production times era. Thanks to the new independent and simultaneous double belt system it is possible to simultaneously load and produce 4 garments at the same time.The autonomous lower conveyor belt transports the processed garments to the starting position..

NEXSTONE

Nexia Ozone Generator

All the system parameters are displayed and monitored to ensure maximum reliability and safety for all operators. Our O’zone system can be connected up to 3 machines both dry and wet . The ozone generator is complete with a catalyst to reduce 100% ozone emission into the atmosphere.
