### **Lenipsor+® GEL**

Is a dermocosmetic based on an innovative complex, Lenipsor+®, indicated for the topical treatment of skin prone to psoriasis. It improves the aesthetic appearance of skin affected by the signs of psoriasis plaques helping to reduce the annoying desquamation, gives relief thanks to the soothing effect, helps to normalize and protect the epidermis. The LENIPSOR+® GEL participates in a non-negligible way in improving the quality of life of those affected by this skin condition.

### **Mode of use**

Pour the LENIPSOR+® GEL into the hollow of your hand and apply 2 times a day (morning and evening) for 2 months on the fragile or irritated by dry skin area. Before applying the Lenipsor+® Gel it is advisable to clean the areas of the skin to be treated with one of the products of the Lenipsor + line. It is important during the treatment to keep the skin hydrated with the moisturizing products of the line LENIPSOR+®.
