

## **Subject: Presentation of the Company, Euro Master Evolution Srl**

I am pleased to have the opportunity to present the Euro Master Evolution Srl Company (in the following EME) which has been on the market since 1970, located in Piedmont in the Cuneo province of Italy.

EME specializes in the supply of rolling stock components for both Railways and Local Public Transport (TPL) and specifically with its three divisions, it is able to:

- 1) Design and produce:
  - sound-absorbing products for the construction of cabs and carriage compartments.
  - cooling bellows and air conveyance.
  - Inter-connecting devices (bellows for carriage connection)
  - tents for vehicles and railway convoys.
  - Seat linings.
  - soundproofing products for the insulation of the carriages.
  - heat shields for industrial and civilian vehicles.
  - straps.
- 2) Make seating for cars, vehicles and agricultural machinery.
- 3) Produce items and accessories for clothing, textiles, plastic and/or leather, bags and backpacks, furniture, sporting goods and technical items in general;

Not least the complete mastery in the review-repair and service of the products supplied.

We are distinguished by our passion for research, quality and innovation on the one hand. Technology and production capacity on the other. Two souls, the artisan and the industrial, that complement each other.

A formula that has conquered the market for over forty years. In Europe, our products are chosen by leading companies in the construction of transport and handling equipment.

Currently at EME at its headquarters in Sommariva, 24 employees work in full compliance with national labor regulations, and in line with the strictest European Quality standards.

The flexibility of our production departments allows us to manage a personalized production schedule: a competitive advantage, which makes us ideal partners both for large orders and for small mass production.

We also take this opportunity to highlight that "as necessary and as a function of business opportunities" our Company is available to participate operationally in joint ventures, mixed companies, consortiums, temporary business groups and European economic interest groups.

We are happy to illustrate our products at our companies through dedicated meetings to be scheduled.

Best regards
