5 pin head

The ideal head, now with 5 micro-needles

FILLERMICROTHERAPY PRPPC

TREATMENT TIME REDUCTION

The 5-needle head is ideal for improving the treatment of skin rejuvenation in the areas of the face, body and to remove fat deposits. The simultaneous injection of 5 micro needles allows to halve the time required for each treatment, while the specifically designed length allows reaching and not exceeding the dermis.

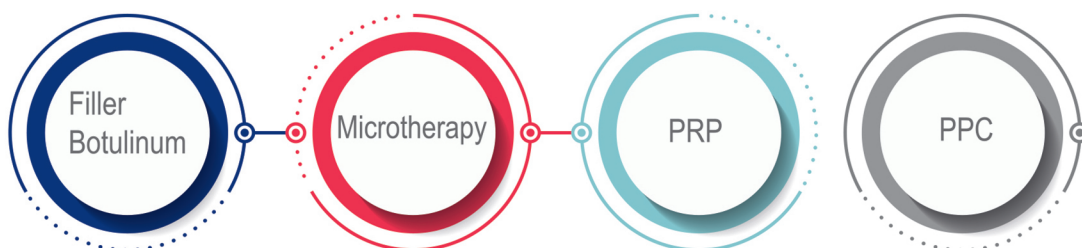

RESULTS OPTIMIZATION

Derma Pin 5 allows a better diffusion of the infused substances, increasing the covered surface with a single injection thanks to the length of the needles of only 1.5mm and improving the patient's comfort. With the head it is possible to inject meso cocktails, fillers and other cosmetic products.

Applications

Optimized to be used with Dermashot

Benefits

- Greater area covered for single infusion
