di Gerardo Pisapia

My company deals with various other agricultural companies in the region of Molise. I am an agronomist and my work is the study of plants, the earth, agronomic techniques with low impact on the environment and respectful of the agricultural ecosystems , insects and the defence of plants , biologically and conventionally, the working of the earth, fertilization and production of various crops in my territory.

I also deal with the process of the transformation of products of the earth into food products (olive oil production, transformation laboratories, wine cellars): in these cases I handle the analysis, the HACCP (HAZARD ANALYSIS AND CRITICAL CONTROL POINTS) and the various certifications that are necessary. The companies I deal with are mostly family run businesses ad they are all typical of the Molise region, a small region in the southern central part of Italy.

When you buy from me you will always find quality at the center of everything. Everything from the collection of the crop to the transformation into food products is under my strict control so that I can guarantee the entire chain of production. I am not a trader of agri-food products but a professional that works in and for agricultural companies of my territory . I only sell products that I handle personally, nothing else.
