COMPANY PROFILE

Established 40 years ago in the heart of the great tradition of Modena precision mechanical engineering, we specialize in the production of mechanical and hydraulic components to Customer projects, and have become a partner of leading world manufacturers of machines and apparatus based on fluid and hydraulic technology.

We still do our job with all the enthusiasm, passion for craftsmanship and flexibility of the past; but, in addition, now we do it with organization, process flows, quality management and production integration tools which are far more structured and up to date.

The result is a streamlined, flexible and reactive organization able, at the same time, to ensure quality and production reliability at industrial level, to integrate with modern logistics needs, and to meet the most stringent international technical standards.

THE MECHANICAL GRINDING
for 40 years is the absolute excellence " Tessari ".

The mechanical grinding, the activity that gave us a name as a serious and reliable company, which allowed us to grow and strengthen our supply relationships with small and large, national and international customers.

The logo features a stylized blue 'C' shape composed of several geometric segments, positioned to the left of the text 'OUR HISTORY' which is in a bold, blue, sans-serif font.

OUR HISTORY

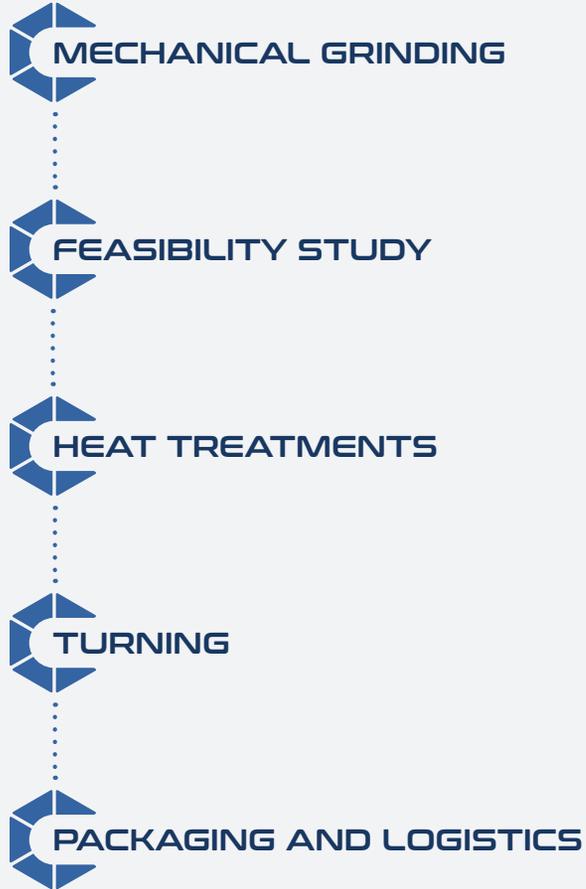

Tessari was established in the second half of the Seventies, like many other companies belonging to the great mechanical engineering tradition of Modena; and like many other firms, it is the upshot of the passion and the desire to “do good” of one man who, after many years spent as a foreman in a large engineering company, decided to start his own business, specializing in mechanical grinding and founded the first nucleus of what was to become, in short, the Officina Meccanica Tessari.

For about fifteen years the Tessari machine shop was dedicated exclusively to mechanical grinding, consolidating its skills, gaining experience and tenaciously building a reputation of serious and reliable company.

These were years of rapid economic growth and, in the Province of Modena in particular, precision mechanical engineering went through a phase of gradual acceleration, business expansion and rapid technical refinement.

The boost provided by a number of large companies in the district (such as Salami Pompe and OilControl), which began to establish themselves at international level, also affected many of their suppliers, especially in the automotive and hydraulic industries. It was specifically in this field that Tessari - order after order - made a name for itself as a reliable and competent supplier of mechanically ground hydraulic parts and components.
