

COMPANY PROFILE

WHO WE ARE

Makers of sound-absorbing panels, composers of PhonoDesign

Our adventure in acoustic comfort began in 2013, when we became importers of the soundproofing products of an important international company. In 2015, strengthened by this experience, we decide to compose our works ourselves, giving life to innovative products that solve the problem of reverberation and at the same time contribute to improving people's well-being. Just like in the world of music, even in the sound-absorbing landscape, conventions must be twisted to create something unique, which is pleasing and pleasing.

Our production of sound-absorbing panels 'out the box'

We choose not to use the thermoforming production technique of sound-absorbing panels: we free ourselves from the conventions and conformity of this sector by creating completely customizable products, in terms of shapes, thickness, colors and dimensions.

We personally follow and take care of every aspect of our projects: from the acoustic analysis and assessment of the rooms, to the creation of the sound-absorbing panels and their correct installation to achieve maximum acoustic and aesthetic well-being. We create original and innovative phonodesign projects that allow you, your customers and your collaborators to spend time in environments studied in every detail and involving all the senses. In fact, our sound-absorbing panels, in addition to being customizable in shape and size, can be combined and embellished with other elements such as: loudspeakers, fragrance diffusers and LED spotlights.

enter the world of PhonoDesign!**

P R O D U C T S

Let's solve the reverb problem

LvB Acoustics interior sound-absorbing panels and sound-absorbing furniture solve the problem of reverberation and improve the quality of the time you spend in an environment, be it for work or pleasure.

Aesthetics and acoustics: a perfect duet

Who said that a sound-absorbing panel must necessarily be only square or rectangular, anonymous and without personality?

LvB Acoustics artistic sound-absorbing panels have names and shapes inspired by the world of music, each with its own character and tone: Concerto, Operetta, Overture, Preludio, Ottava, Quartetto, Melodia, Soprano, Croma, Variazione.

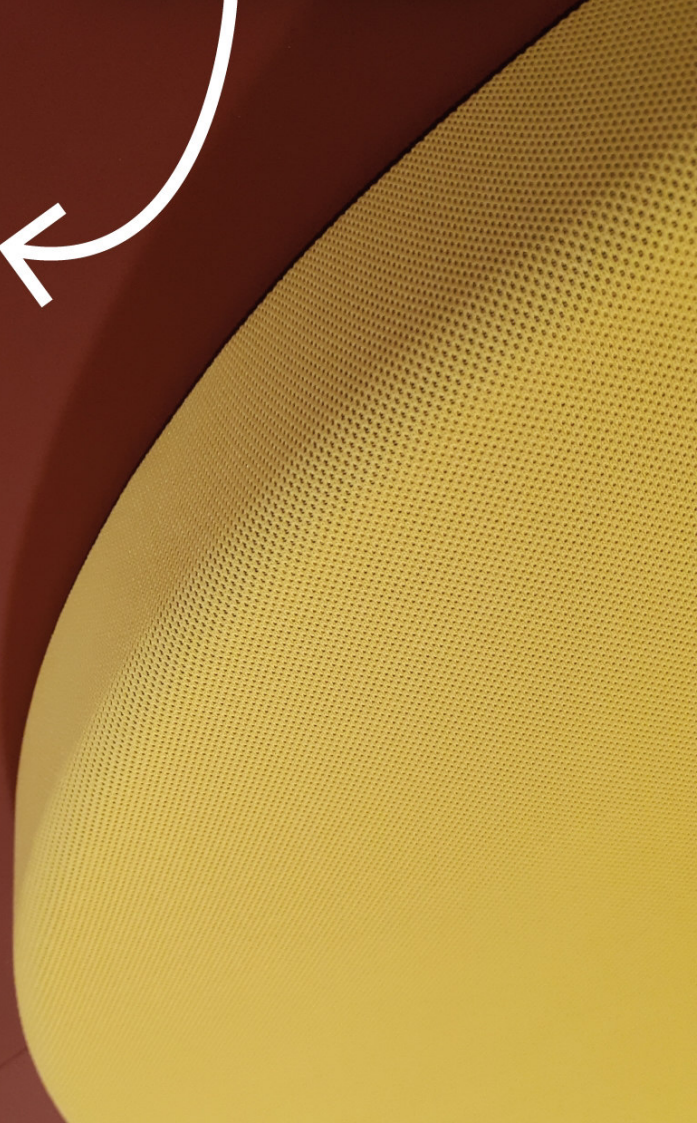

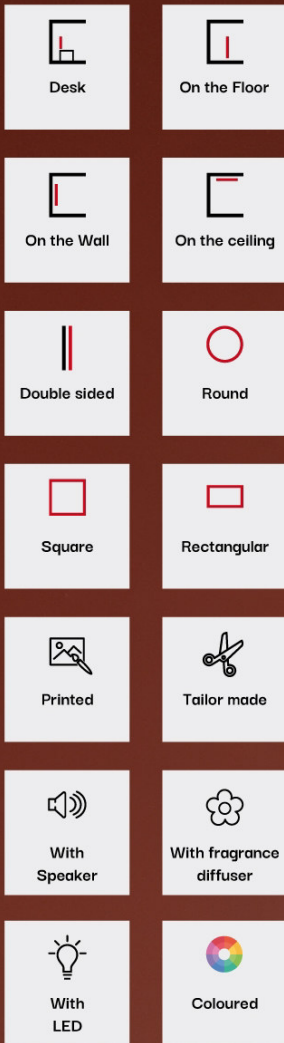

Customizable sound-absorbing panels: for voices out of the box

Just as each melody is unique, the acoustic needs, style and character of a room are also unique. So why not get out of the canons of classic sound-absorbing panels?

Our colored sound-absorbing panels are customizable in shape, size, fabrics and prints. We create custom made sound-absorbing panels of any size and thickness that adapt perfectly to your needs and those of the environment in which they will be installed. Also available with removable covers and a wide range of colors to choose from, to change the look whenever you want.

We improve the acoustics, we create PhonoDesign

LvB Acoustics products are designed for the physical and mental well-being of people.

ACOUSTIC DESIGN

Even the best concert starts with the planning

We at LvB Acoustics take care of eliminating the problem of reverberation in buildings being designed or completed, to ensure that those who spend time there for work or pleasure can enjoy an experience of total PhonoDesign.

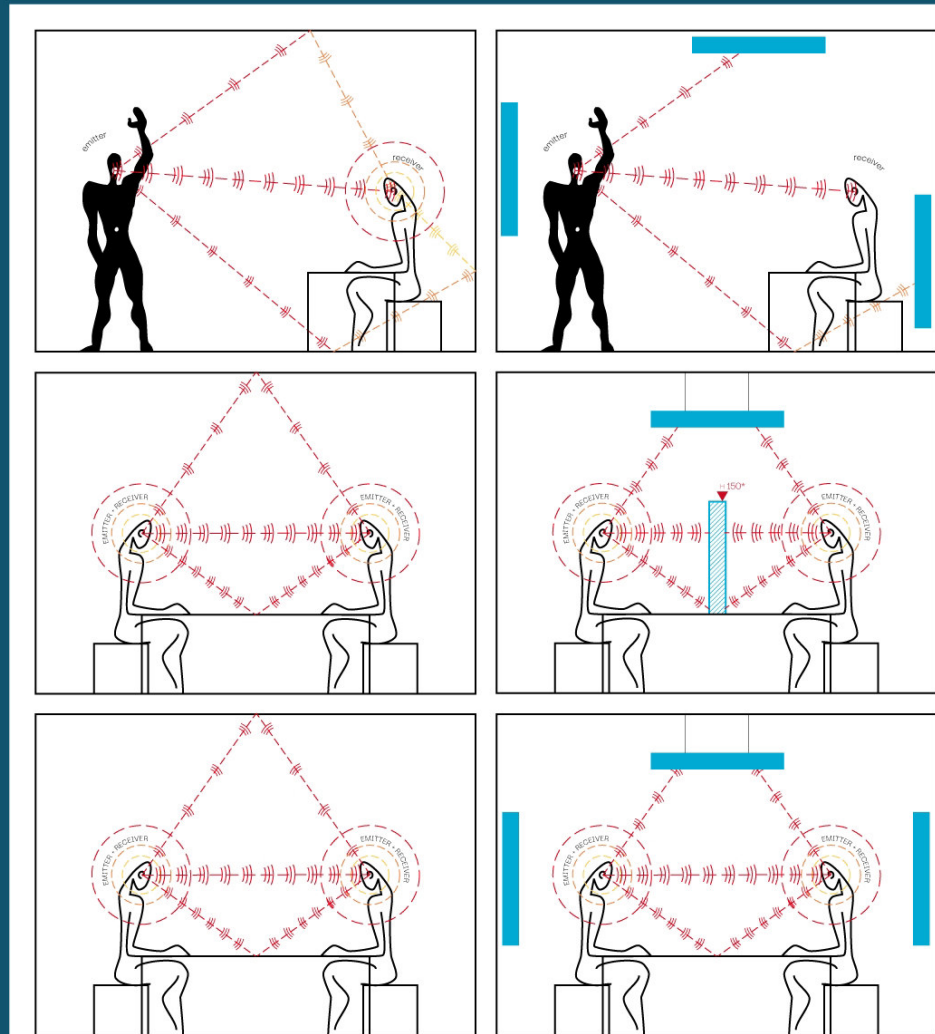

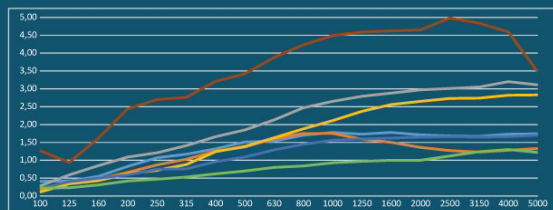

The goal of acoustic design is to organize an environment so that the sound inside is clean, clear and pleasant, and above all it does not disturb people's activities.

LvB Acoustics software for acoustic design

Acoustic design is the result of complex calculations, which is why at LvB Acoustics we have developed software with the help of specialized acoustic engineers that allows us to identify the best solution for any type of environment thanks to the information you can provide us directly by filling out the form dedicated.

Starting from the type of room (restaurant room, office, open space, meeting room, etc.) with the relative square footage and from the structural materials present on the flooring, ceiling, walls and the presence or absence of windows, we could develop a tailor-made solution that with the installation of our acoustic panels you solve the problem of reverberation once and for all.

Contact us for a custom acoustic evaluation.

WHAT DO WE DO

Reverberation is not the only disturbance that our visible sound-absorbing panels can solve.

We create a proposal that involve all the senses, including sight and smell.

Our professional sound absorbing panels are designed to adapt perfectly to any space and to be integrated with other accessories, to complete all-round PhonoDesign. Inside the sound-absorbing panels you can choose to insert invisible speakers to spread music, integrate fragrance diffusers and transform them into works of art with sharp and defined prints. In addition, you can transform them into design lamps with the inclusion of LEDs, including RGB, and choose the color or adjust the light intensity via remote control.

Not only panels, but also sound-absorbing furniture

Acoustic comfort alone is incomplete: this is why we have combined the pleasure of an environment without reverberation with comfort, creating sound-absorbing furnishings.

Eff is our sound-absorbing sofa that alone can create a private environment, to isolate yourself from external disturbances, take a break, or exchange a few words without interference.

To complete our range of sound-absorbing furniture, the Soprano office phone boot: once hung on the wall, you can make phone calls without the annoyance of background noise and without disturbing those around you.

LvB Acoustics professional sound absorbing panels: a sustainable choice

At LvB Acoustics we believe that PhonoDesign is a very broad concept, which goes beyond the walls of a building, involves everyone and also concerns the protection of the ecosystem.

This is why we make our products with recycled and recyclable PET plastic fibers that derive from the recovery of plastic bottles and bottles and 100% recycled and recyclable fabrics.

HOW DO WE DO IT

The right balance between craftsmanship and industrial production

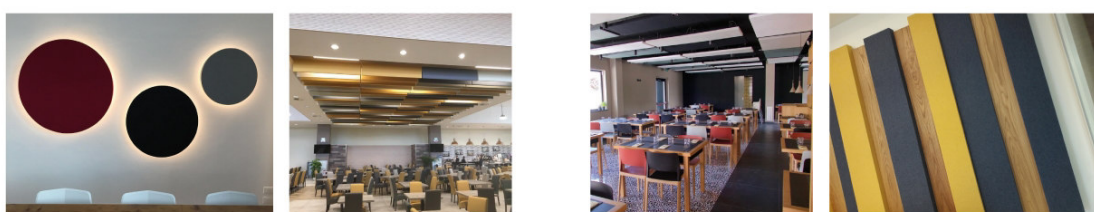

LvB Acoustics products **produced entirely in Italy** are the result of the 'know-how' of our craftsmanship combined with a vision and production that is always aimed at making processes more efficient and products more performing.

REFERENCES

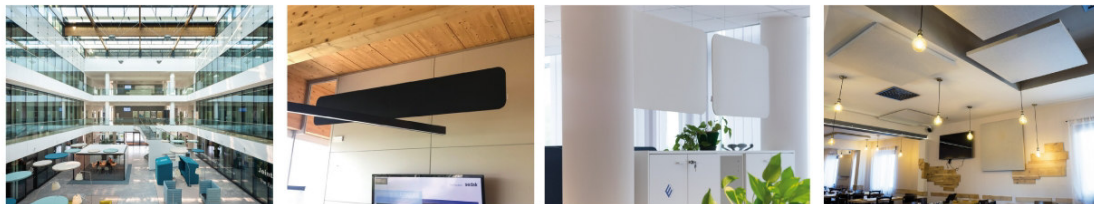

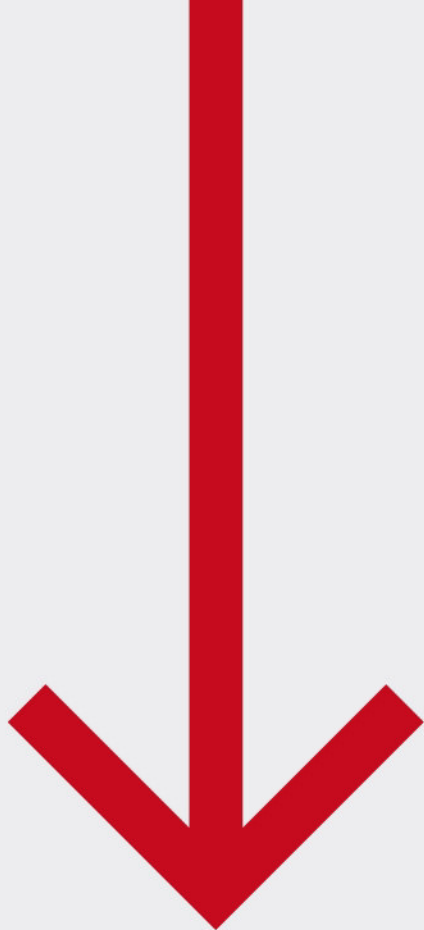

For 4 years LvB Acoustics has been present on the national territory, our reality has quickly proposed itself even outside the national borders by starting distributions in Spain, France and in the main European markets.

We have had the opportunity to satisfy requests from many customers, all equally important to us, but we wanted to thank for the trust placed in us, among others:
