In 1942 my grandfather began designing and manufacturing original floor closers and a complete range of hardware for frameless tempered glass door assemblies.

We have grown in size and organisation since then, but we are still keeping alive his vision for: originality, consummate skill and effort, maniacal attention to detail, constant innovation and improvement, rigorous testing, together with the passion, responsibility and pride we feel to be associated with the "Made in Italy" quality. It's in our blood.

We work extra hard to satisfy the needs of even the most challenging architects, designers and installers. We focus on all details so you do not have to.
