

P.S./INTELLIGENT CROSSINGS" SYSTEM SOLUTIONS COSTS AND DESCRIPTIONS

- INTRODUCTION:**

The Service S.r.l. offers state-of-the-art technological solutions, qualified resources and a wide range of services, including "INTELLIGENT P.S./ CROSSINGS ".

- "INTELLIGENT P.S /CROSSINGS" SYSTEM**

"P.S./Intelligent Crossings' is a signalling system for pedestrian crossings not already covered by traffic lights

It complies with all road safety regulations.

The idea of "P.S./ INTELLIGENT TRAFFIC" is protected by patent no. 1370960.

It is internationally recognized and matches with the Italian Highway Code.

"P.S./Intelligent Crossings', the principle is to alert but not habituate motorists, increases pedestrian safety and enhances road safety.

"P.S./Intelligent Crossings" was born out of the consideration that the pedestrian, about to cross the road, may not catch the attention of the motorist who, coming suddenly upon the road,

may find himself in a situation where he has to cross the road having to carry out manoeuvres that are dangerous to themselves and others.

"P.S./Intelligent Crossings" performs an early warning and signalling action at the moment when the pedestrian approaches the pedestrian crossing and attracts the attention of the motorist.

It contributes to improving drivers' compliance with the Highway Code, with a view of cooperation between the road owner, the driver and the pedestrian, whose safety is better protected.

"P.S./Attraversamenti Intelligenti" is an original idea conceived, engineered and produced in Italy; a system designed to be perfectly integrated into street furniture (International Patent no. 1370960).

Registered Office: Viale Papa Giovanni XXIII, 106 - 24121 Bergamo
Operating Office: Via Giovanni Pascoli, 75 - 24038 Sant'Omobono Terme (BG)
