CATALOG

What's Aloeplus?

Aloeplus is a line of products based on Aloe Arborescens and other valuable plant extracts, designed specifically for the well-being of your loyal friend.

Thanks to its patented formula and the over 300 active components in each individual product, the ALOEPLUS line can be used both for prevention and for treatment of multiple health issues for dogs and cats.

We develop natural veterinary products since 1997.

What prompted us to dedicate ourselves to the study and production of natural products, mainly based on Aloe Arborescens, is the knowledge that nature is able to offer us the best remedies and solutions to preserve, improve and care for the health of our furry friends.

What differentiates us:

1 *The variety of Aloe we have chosen*

We chose to use Aloe Arborescens from certified Italian organic cultivations and not the more popular Aloe Vera, because Aloe Arborescens, as shown by various scientific researches and by recent bibliography, has a concentration of active ingredients 3 times higher and therefore has greater therapeutic properties than Aloe Vera.

2 *The Aloe leaf processing method*

We have developed an Aloe processing method called "HDR® method", innovative, effective and tested, protected by trade secrets.

The "HDR® method" allows cold extraction of all the active ingredients not only from the internal gel, but from the entire leaf of Aloe Arborescens. The cuticle, external part of the leaf, contains an enormous percentage of active principles with anti-inflammatory, antioxidant, anti-radical, anti-tumor properties. The result is a very rich extract, with all the active ingredients present in the Aloe Arborescens leaf.

Working, studying and focusing only on Aloe Arborescens and at the same time creating a functioning HDR® method, effective, tested and 100% guaranteed, allows our loyal friends to get the MAXIMUM benefits from the Aloeplus products.

In 2006 we demonstrated the synergistic effect between Carrot and Aloe Arborescens, to the point of being able to patent the formula as "Vegetable mixture with therapeutic energy and cosmetic activities".

In 2012 Phytotherapy Research, a prestigious international scientific journal, published a trial of the University of Naples Federico II that showed how the aloe extract obtained with the HDR® method reduces the proliferation of tumor cells and promotes the regeneration of healthy ones.

We take care of all the steps necessary to study, create and distribute our products: selection and processing of raw materials, formulation and registration. We select the best raw materials and the packaging is carried out in such a way as to allow optimal preservation of the products.

We work with one purpose, happiness.

Our goal is to make our customers happy by offering natural products that have real beneficial effects. Whenever people who trust us smile for having solved their four-legged friend's problems, we smile and are happy with them!

Perks of the oral line

It is the first oral line in Italy based on Aloe Arborescens, and other precious natural extracts specifically designed to be used in prevention and treatment. It can also be combined with classic pharmacological therapies to enhance their benefits and at the same time reduce the risk of side effects.

More and more veterinarians rely on the therapeutic properties of **Aloeplus** products for the care of our beloved furry friends.

From the first 48 hours of administration enormous benefits are evident both in dogs and cats: hair shine, more energy, better resistance to efforts, increased appetite, better joint function.

It facilitates and shortens the healing process for numerous diseases that afflict our pets thanks to the immunostimulant, antitumor, antibiotic, detoxifying, pain-relieving, anti-inflammatory action* of the active ingredients present in **Aloeplus** products formulations.

* components properties as per scientific literature

SYRUP

ALOE ARBORESCENS, HONEY, CARROT

Ideal in case of:
