

ANZALONE GESSI was founded at the beginning of the 20th century as an artisan business and it was registered as a Ltd. company in 1990.

Thanks to the experience matured over 4 generations and our constant pursuit of quality, we have developed a wide range of traditional and innovative products spanning from gypsum to cement, and natural hydraulic lime. All products conform to the current EU regulation and respect all the necessary requirements for the CE marking.

In 2003 we established the **INPRECEM** division, which focuses on premixed cement-based product lines and technology products. Inprecem is the result of numerous years of research and development tailored to satisfy the demand of the modern construction industry and evolving standards.

INPRECEM offers highly diversified products, able to meet all requirements on building sites: **thermal and acoustic insulation, protection against water, waterproofing, tile adhesives and restoration of reinforced concrete structures.**

In line with the innovative spirit, and to promote eco-design and recyclable products, we launched a second division: **INPRELIME**. The product line is made up by NHL 3.5 natural hydraulic lime according to EN 459-1 standards, and it is designed for architectural restoration and green building industry. The natural hydraulic lime allows the realisation of low-soluble salts products with rising mechanical features over time and high-permeability values to water steam.

BUILDING SOLUTIONS

ANZALONE GESSI

INPRECEM

INPRELIME

Our product lines can be summarised as follows:

- Traditional or thermal insulating plasters
- External thermal insulation systems (ETICS)
- Thermal and acoustic insulation
- Tiles adhesives

- Cementitious waterproofing mortar
- Traditional or thermal insulating screeds
- Skim coats
- Tonachina
- Restoration grouts
- Natural hydraulic lime-based plasters
- Restoration systems

HAPPY BUILDING

We will gladly provide you our technical assistance in order to help you choose the best products from our range. For additional information and technical sheets please refer to our website: www.inprecem.it
