

**internal handling transport lines**  
**design - manufacture - installation**

## ABOUT US

CM Automation has been an active player in the field of industrial movement and handling since 1999 and has now become a tried and true leader in Italy. We work in Italy and abroad.

**We design,  
manufacture  
and install lines  
for interior  
movement  
and handling,  
overhead and  
floor conveyors,  
offering  
monorail, two-  
rail and manual  
conveyors.**

*In the monorail conveyors, the function of bi-planar chain is twofold: traction and load-bearing.*

*The two-rail conveyor features flexibility of use and is modulated according to the different needs of a complex.*

*The use of a manual conveyor is a logical and valid choice where handling does not require excessive rhythm or overly complex production cycles.*

Since 2011, following the acquisition of FA Ganci in Modena, we have been able to complete our offer by providing every type of hook, transport unit and specific accessories for painting systems and lines.

**We meet and satisfy any and every variation or request, including the integration and supply of spare parts for our lines or even those installed by other companies.**

## SERVICES

### DESIGN

We work with customers from moment they step in our doors, studying and organizing the best solution for their specific needs.

### INSTALLATION

From planning to implementation, we also assist the customer in the installation of the conveyor(s) at their headquarters.

### MAINTENANCE AND ASSISTANCE

The maintenance of product movement and handling is one of the most important activities that must be implemented after the commissioning and installation of the systems and machinery.

### TURNKEY SYSTEMS

We can follow the customer both in the individual stages of the implementation and in the creation of a turnkey project for the entire system of internal movement and conveyors.

### ACCESSORIES

Available in stock and ready to use spare parts and accessories for conveyor systems and spare parts for existing hooks or trolleys.

*special systems*

*chains for conveyors*

*accessories*

## HOOKS

We have numerous models in stock. Based on the customer's needs, we can provide specifically designed and developed models, taking into account the size of the pieces and the overall dimensions of the chain, therefore optimizing the efficiency of the system and the production itself. Additional facilities include numerous special parts for existing hooks or trolleys.
