HAVE A QR CODE

**MAIN ECONOMIC ACTIVITY FOR NATIVE COMMUNITIES**

The trade of wild fur is a tradition of excellence and one of the oldest economic activities of the northern countries, which allows the maintenance of many native populations which otherwise would have no work

The hunting is regulated by states laws which establish specific periods, specific areas and a maximum catches limit. All this is permitted only to those who own the specific hunting license (limited number)

**REGULATED ABATMENT PLANS**

**CIRCULAR ECONOMY**

The business of wild fur doesn't regards only fashion industries because thanks to a well-proven system all waste and not used parts are use in others sector for example as fuel, fertilizer or animal feed. In this way, nothing is wasted and it's reused in many other sectors

With the agreements AIHTS 1997 the use of the traps is strictly controlled and regulated in order to guarantees the international standard as concerns cruelty free

**CRUELTY FREE HUNTING METHOD**

- WILD FUR**
- Coyote
  - Beaver
  - Canadians raccoon
  - Red fox

- FARMED FUR**
- Finn raccoon
  - Blue shadow fox
  - Blue fox
  - Blue frost fox
  - Silver fox
  - Whiteraccoon
  - Mink

**CIRCULAR ECONOMY**

The business of wild fur doesn't regards only fashion industries because thanks to a well-proven system all waste and not used parts are use in others sector for example as fuel, fertilizer or animal feed. In this way, nothing is wasted and it's reused in many other sectors

Every farm must comply with the states regulation and with the Finnish Animal Welfare Act protocol in which health and wellness of the animals are the absolute priority, even for this reason there are checks carried out by experienced veterinaries

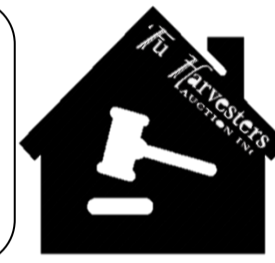

**ANIMAL WELFARE**

**CERTIFICATIONS AND TRACEABILITY**

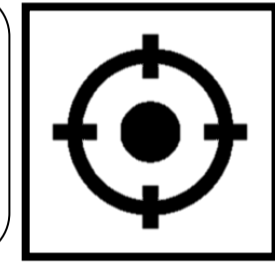

All materials that come from the approved farm have a complete documentation about the history of their animals complete with health and veterinary certifications. Starting from last year is added to this the traceability system Welfur with which the buyer can simply trace the skins he has purchased

Business of farmed fur is a essential part of the Finnish economy. The cold weather doesn't permit many activities and even thanks to the circular economy a lot of companies have been working for decades in this sector which cover a wide range of different activities

**PIVOTAL PART OF FINNISH ECONOMY**

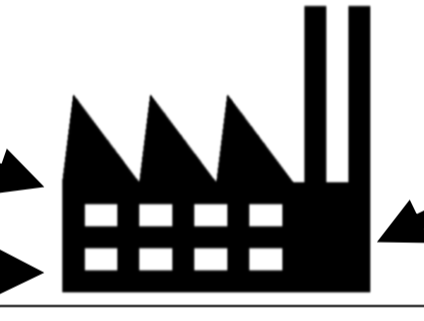

In Fur Harvesters is purchased most of the wild fur, this auction house is strictly controlled and the supply of all the skins is regulated directly from the state laws which guarantee the integrity of the territory and the correct observation of the pre-established abatment plans

A small part of wild fur are bought direct from the authorized personnel for hunting, even this supply source is strictly controlled from states law and from states regulation imposing a series of authorizations and above all issue a limited number of licenses to regulate hunting

In Saga Furs is bought all farmed fur, this auction house is strictly controlled and regulated especially regarding animal's welfare and traceability, Saga Furs has a very controlled supply plan in order to guarantee that the Welfur protocol is fully meet
