COMPRESSION SOCKS

WE CREATE WELL-BEING DAY BY DAY

Knee-Highs, Stay Ups, Pantyhoses and Unisex Cotton Socks designed for dynamic people who need the preventive action of elastic compression but don't want to compromise on style.

These articles have been designed to meet the needs of a clientele that's becoming increasingly aware of leg comfort and health.

Available in four levels of compression, this elegant product line features a true heel, an anti-shrink cuff and extremely soft fabrics.

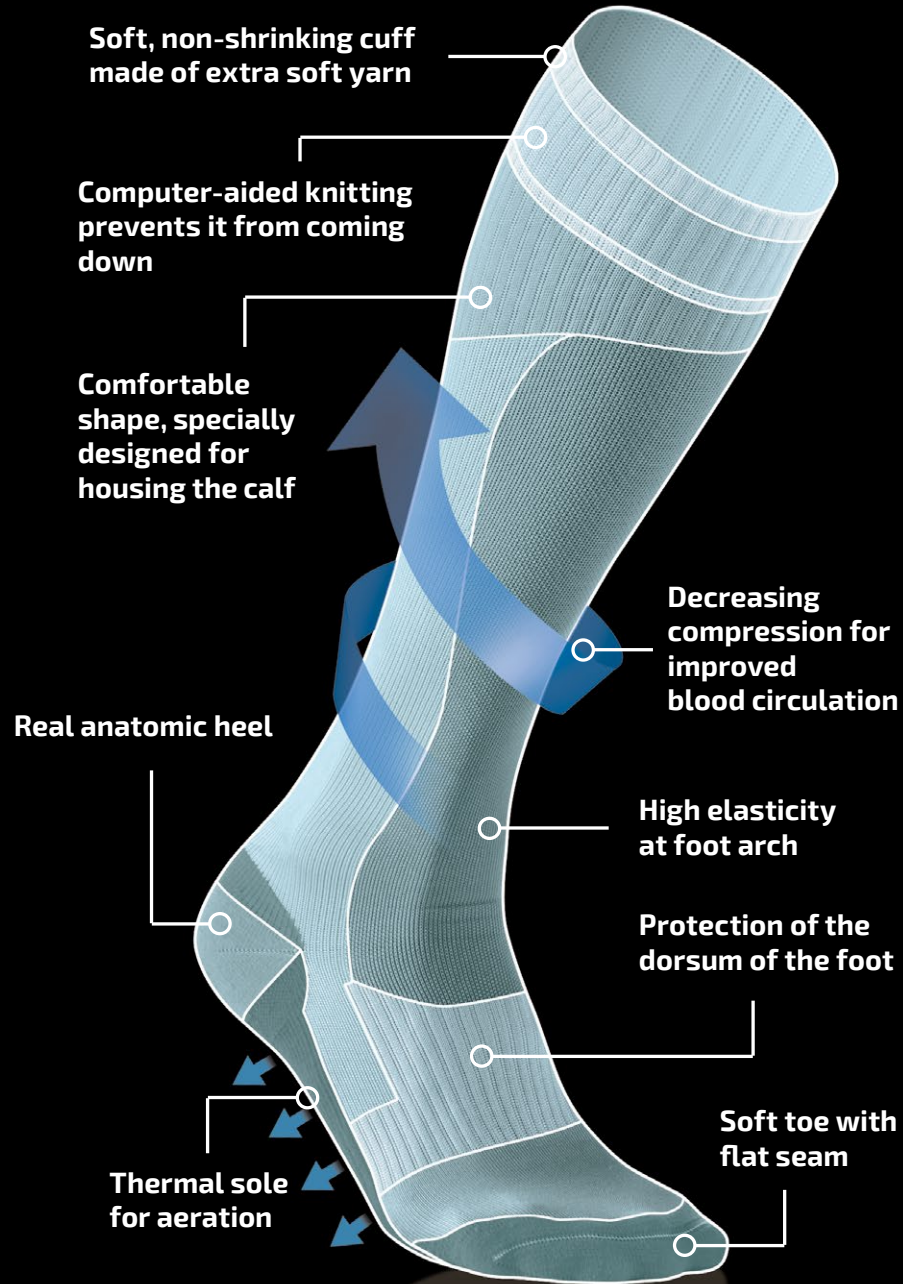

HOW DOES IT WORK?

Compression socks increase blood flow, which has several positive effects. Graduated compression starts at the ankle and moves upwards with decreasing pressure. The compression helps the venous return towards the heart. Medical graduated compression socks are produced according to standards that specify in detail how they should be designed to achieve the correct compression and medical functionality.

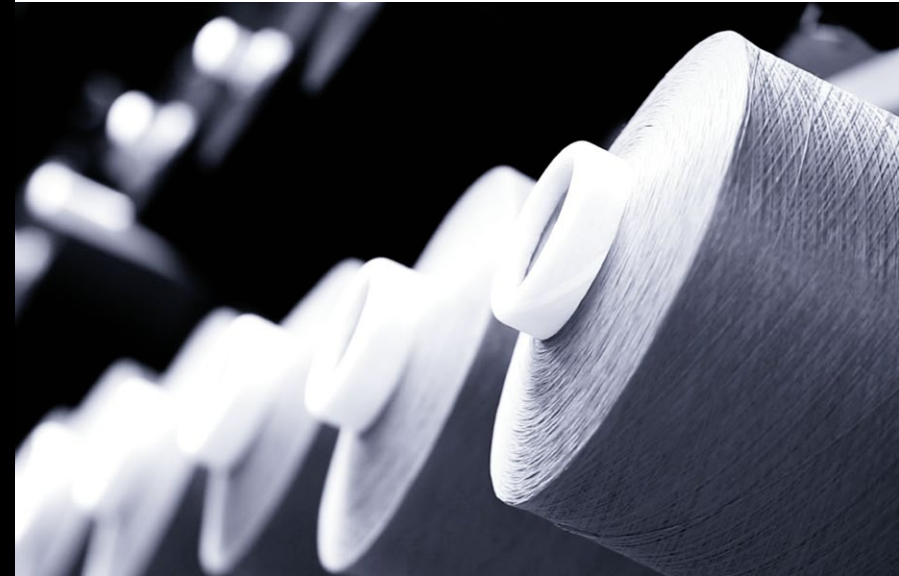

Graduated compression socks have a proven effect for:

- Preventing swollen legs and feet
- Preventing tired and heavy legs
- Preventing varicose veins and spider veins
- Preventing deep-vein thrombosis (blood clots)

DIFFERENT MATERIALS SAME FUNCTIONALITY

Sanyleg can offer compression socks in a wide variety of materials. If you are looking for a warm and comfortable sock for outdoor use, merino wool is a good choice. For an elegant look, there are a wide range of nylon socks, tights and stay-ups to choose among. Tell us what you need and we will find the best material composition and design for you.

KNEE-HIGHS

MANAGEMENT SYSTEMS

NO LIMIT TO RESEARCH AND DEVELOPMENT

To reach the correct functionality for a compression sock, you need to develop a sock that gives the correct pressure at certain measuring points. There are different levels of compression depending on how the sock will be used. Sanyleg has a well-equipped laboratory that can conduct compression tests. These tests are performed during the product development process, and random tests are performed during production.
