

FILTERCOMM

FILTERCOMM

We are a group of experts with a **passion for the mechanical manufacturing industry**.

Inquire, understand, achieve: these are the tools with which we satisfy every one of our clients.

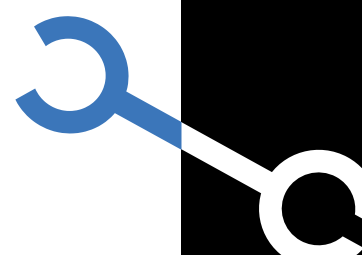

MISSION

- **Improve working conditions** inside mechanical workshops;
- **Increase efficiency** of production processes;
- Contribute to **protect the environment**.

ALL IN ONE

We are your single reference point, able to offer a wide variety of products and services.

A team of experts who contribute to each project's success and who will guide you through your choices, project fulfillment and through pre- and post- sales assistance. This is where we make the difference!

Industrial filtration solutions
to increase productivity and protect workers' health.

AIR FILTRATION

Mist collectors and filters suitable for every machining requirement, designed according to the highest quality standards and the most stringent, current international norms, to guarantee **a healthy, clean and safe working environment.**

Oil mist collectors

Innovative industrial air filtration solutions for treatment of oil mists and smoke.

COSMOS

The Premium range of oil mist collectors specifically conceived for high-production machine tools and heavy-duty machining.

SPACE

Compact, easy maintenance industrial air filters ideal for all types of machining and machine tools.

STAR

State of the art oil mist filtration units specifically conceived for large sized machine tools and centralized filtration systems.

Dedusters and fume collectors

A range of dedusting units specifically designed for dry machining applications.

STARDUST

Dedusting units with cartridge self-cleaning system, designed for suction of dusts directly at the machining source.

SMOKY

Compact, mobile extractors suitable for the filtration of fumes, dust and oil mist. Ideal for small workstations and open machine tools.

Industrial vacuum systems

Powerful, reliable, mobile units for cleaning, material movement and production processes.

AIRVAC

A robust single-phase industrial vacuum unit, suitable for any requirement in the mechanical workshop.

POWERVAC

Powerful, three-phase industrial vacuums with great suction power and high filtration efficiency.

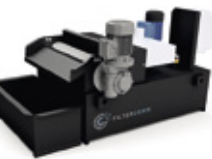

COOLANT MANAGEMENT

A wide variety of products to maintain maximum efficiency of metal working fluids, to enable you to **increase productivity, optimise maintenance processes and reduce waste of time and money.**

Coolant filtration systems

High-quality, effective solutions for the filtration of industrial lubricants.

MAGDISK

Magnetic separator for highly efficient separation of magnetic sludge from coolants, ideal for treatment of both emulsion and neat oil.

GRAVITY

Flat bed filter fabric filtration systems, extremely reliable and ideal for different types of machining processes and industrial lubricants.

DEEPFLOW

Compact, hydrostatic filtration systems for mid- to large flow rates, efficient and very versatile, for use in single and centralised solutions.

ROTODRUM

Self-cleaning drum filter with customizable filtration efficiencies, low maintenance requirements and ideal for both single and centralized solutions.

Industrial chillers

State of the art solutions for temperature control of industrial coolants.

ICY

Compact units with highly efficient evaporators, customizable and with low maintenance requirements

FREEZ

Industrial chillers with immersed cooling coil, particularly suitable for direct installation on tanks.

ARTIK

Premium industrial chillers equipped with exclusive elements and available in a wide range of models.

Filter media

A wide selection of filter media for all types of paper filtration systems and all kinds of requirements: polypropylene, polyester, viscose and highly performant technical fabrics.

Oil skimmers

Solutions for the elimination of surface oils from industrial coolants.

BELT

Belt skimmers for a simple and versatile solution to remove surface oils from coolants.

DISK

Disc skimmers for an easy installation on any tank, to remove surface oils from industrial coolants.

PUMP

Skimmers with pump for the treatment of large volumes of industrial coolants and very efficient for the removal of superficial oils.

Industrial vacuums

Oil and chip industrial vacuums, ideal for maintenance of machine tools.

PUROIL

A compact and mobile vacuum unit for suction of oil and chips, available in single-phase or three phase versions.

JUMBOVAC

Powerful industrial vacuum for oil and chips with great containment capacity.

ENGINEERING

Our know-how and our experience for your **customized solutions**.

We project and produce customized filtration systems and installations according to your needs.

Filtercomm solutions
all in **one**.

all in **one.**
