**Water Filtration System C1P is compliant with Italian DL 31/2001  
In transposition of the European Community Directives  
and compliant with DM 25 of February 7, 2012.**

***TESTED AND APPROVED BY THE SUPERIOR INSTITUTE OF HEALTH.***

(Reference year 1987/1991 in name of Purity Italy)

C1P's technology is suitable for the reduction of undesirable products present in "POTABLE" water is able to hold filtered substances inside tenaciously and without danger of release (cessation phenomena).

Example: bacteria of various types, Mud, sand, rust, phenols, chlorine, hydrocarbons, petroleum, oil, herbicides, pesticides, herbicides, etc.

The technology has been checked and verified at top international universities as well as Italian and U.S. institutions (NSF year 1996).

Brief and concise report issued by the University of Turin:

When the system was subjected to drinking water filtration, it provided a product with significantly higher quality indices; it did not retain dissolved mineral salts in the water, and there were no transfer phenomena.

The device has demonstrated an inherent high technological quality in retaining undesirable substances.

The system can be used freely in any water declared "POTABLE" without contraindications.
