C1P TECHNOLOGY - HOW IT WORKS

C1P filter technology, housed inside the patented GMW J1 filter with interchangeable filter, recreates a series of natural filtration processes as in soil.

C1P filter material, being sealed inside the J1 filter, cannot have contact with external agents that can alter the quality of the water or filtrate, and there are no chemicals to carry out the filtration.

Included in the category of "other types" at the Italian Ministerial level.

MULTI FILTRATION: Macro, Micro and Ultra Filtration with "Rain Effect"

The various processes of multi filtration have very specific functions in order for C1P to function properly, each function being basic to the next.

In the first stage from the entry of water, a series of dynamic fluid recreates a process of reoxygenation of the H₂O molecule and at the same time, in a first contact with the filter material with the normal flow of water and its components present in the molecule for example soil, mud, rust (turbidity), a natural "bed" is going to be created (it will be visible in color at the end of use of the filter) that will perform further pre-filtration and flow reduction allowing a longer contact time of the water molecule with the C1P technology.

In addition, also in the first stage, chlorine present in the drinking water is retained, also increasing the concentration of the potential of the bactericidal formula; other filtration stages that make up C1P technology will perform their functions and/or filtration and retention of any substances present in the drinking water until the exit from the GMWJ1 C1P filter.

Mineral salts essential to the human body are not touched as also stipulated by ministerial decrees.

The C1P technology housed inside the GMW J1 is unique in the international field for food use and should not be confused nor compared with purifiers; in fact, it is not a purifier, the system does not purify but filters reducing unwanted substances.

With C1P technology, the highest level of various types of filtration in one product has been achieved.
