RAL 9001

RAL 9022

For most bracket types, the plastic covers in the special colours of this palette will be readily available, to get a perfect aesthetic result also when time is short.

MB AND VDI 6036

YOUR SPECIALIST FOR RADIATORS MOUNTING SYSTEMS

Safety is the most important concern when mounting radiators on the wall or on the floor. At MB we take this very seriously, using our knowledge and experience to develop and produce brackets that are 100% safe when mounted correctly. We take care of ensuring that no problem arises also when radiators are used in an anomalous way. **Our special team tested the brackets even in very peculiar situations:** just have a look at our video <http://vimeo.com/mbfix/vdi6036> to watch more and have fun! **We do not encourage you to do the same, but if you do, please make sure that your wall is robust enough;** one must never forget to take into consideration the wall characteristics when choosing screws, plugs and number of brackets to mount his/her radiator.

MB developed several dedicated solutions, both for wall and floor mounting, **complying to class 3 of VDI 6036**, i.e. to the highest safety level, apart from individually defined prescriptions in special environments. For each bracket, a **comprehensive table specifying how many brackets** have to be used for each radiator size is available for **download from www.mb-fix.it**.

MB AND VDI 6036

YOUR SPECIALIST FOR RADIATORS MOUNTING SYSTEMS

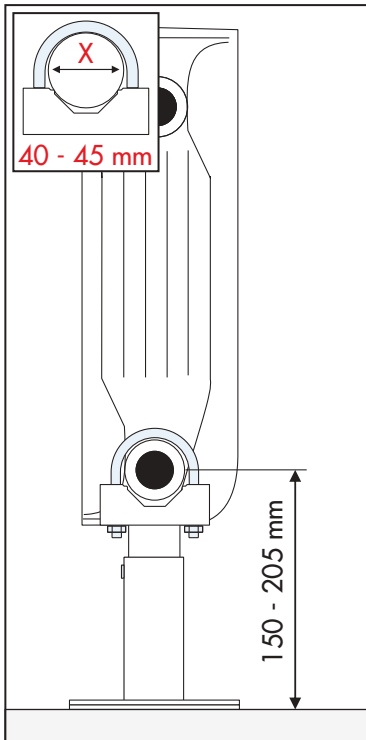

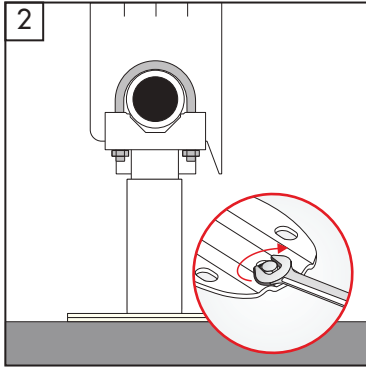

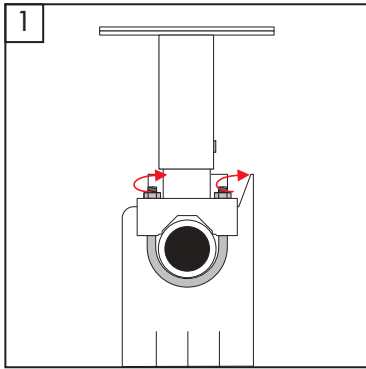

The recent **VDI 6036** directive is changing the way installers, engineers and architects think of safety in mounting radiators. Depending on the application and placement of the radiator, limits are set to forces and displacements. In public places like hospitals, schools, banks, stadiums, etc. a higher standard is required. **TÜV SÜD** verified the conformity to the directive of a comprehensive list of **MB brackets for all radiator types and applications**, for extra safety and confidence for our customers.
