ABOUT US

Since 1982, **Studio Paci S.r.l.** which is an engineering and architectural company, deals with civil and industrial engineering as well as with architecture and restoration. To be precise, Studio Paci is well known in Italy when it comes to the Restoration and Consolidation of Listed Historical Buildings.

Beta Progettazioni S.r.l. was founded in December 2014, thanks to the 20 years of professional experience accumulated by the five different associated founders. It's qualified in electrical, thermal, hydraulic and special systems design. In addition, it also specializes in fire prevention, energy audits and energy efficiency solutions developments.

Building Advice S.r.l. is a company born to cover all the services needed by the firms, ensuring an optimal collaboration between the Client, the Designer and the Company. It's competent in business consulting activities such as: Strategic Planning, Project Analysis, Technical Support for all Contracts, Budgeting and Cash Flow. To conclude, Building Advice S.r.l also handles monitoring activities, from cost control to site accounting, coordination of administrative documentation, etc.

The collaboration between our companies enables us to share knowledge and mutually exchange experiences for continuous learning. That's why, our new venture is even stronger and more competitive, allowing us to offer a more integrated and specialized design service.

As for our team, it is composed of highly qualified professionals with many years of experience in design, works management, and the management field.

Engineers, architects, technicians, and other specialists work in synergy to ensure a multidisciplinary approach and maintain our differentiated high-quality standards.

We also offer services in architecture, civil engineering, structural restoration and consolidation, plant design, energy and fire prevention, and all aspects related to construction management and business activities.

This means we oversee the entire design process, from conception to execution, whether for public or private projects, newly built or heritage-listed, ensuring efficiency, sustainability, and the highest quality.

VISION

We are dedicated to enhancing people's quality of life by creating tailored solutions that are perfectly suited to each environment and context.

MISSION

We believe in the value of every individual, in the power of collaboration and open dialogue and fostering the professional growth of each team member. We are committed to promoting and executing cutting-edge projects, staying at the forefront of change while drawing on a crucial asset: **our history**.

TECHNOLOGICAL DEVELOPMENT AND RESEARCH

We constantly invest in research and development, keeping up with new technologies and innovative techniques to guarantee projects of the highest quality and reliability. Moreover, our achieved results do not neglect any aspect of the design process phases, providing cutting-edge solutions for each stage of them.

BIM Method (Building Information Modeling)

Our design approach's key point is BIM Method. This recent mean consent us to completely manage each design process phase, encouraging effective collaboration between the involved disciplines . Using BIM, we analyse and control every project detail, in a virtual environment, assuring greater accuracy, good management and a fluid communication between team members.

Constant Innovation

An essential element to reach excellence is a constant evolution. We explore new technologies and methods to improve our processes and achieve better results. We also invest in the continuous training and retraining of our group, keeping up with the sector's latest innovations. This commitment gives us the chance to propose modern solutions, satisfy recent needs and anticipate the future challenges that our clients will propose us.

NUMBERS

Our aim is to create right solutions for each environment and context, improving people's life quality.

WHERE WE

INTERVENE

VALUES

MULTIDISCIPLINARY APPROACH

Our strength lies in a heterogeneous and multidisciplinary team, made up of engineers, architects, technicians and specialists who work together in synergy to offer integrated and complete solutions.

Thanks to this interaction, we face every challenge with a global and innovative vision, guaranteeing results that combine technical excellence and creativity.

SHARING

We strongly believe in the power of collaboration and in knowledge sharing activities.

Our approach is based on transparency and teamwork, creating an environment where ideas can thrive and turn into innovative solutions.

PASSION

Passion for our work pushes us to constantly innovate and improve ourselves.

Furthermore, each team member shows enthusiasm and dedication to every project, contributing to Engobe's group success and business expansion.

QUALITY

Quality is something that cannot be missing from our work.

Each phase of our projects is strictly controlled and verified to ensure compliance with the highest standards, to fully satisfying our clients requests as well as the current regulations.

The effort we put into achieving success is reflected in our work's results, which combine reliability and precision.

PEOPLE

Our team is composed of almost a hundred employees and collaborators.

It's a diversified partnership of architects, engineers, surveyors and industrial experts, of whom about 70% of are under 35 and 50% are represented by women. We truly value our human resources, giving them the chance to grow and improve in a stimulating and positive work environment.

We also promote our team wellbeing, assuring a good balance between professional and private life.

SUSTAINABILITY

We retain that to design sustainable buildings and infrastructure is essential to face the current environmental challenges.

We continuously try to realize increasingly energy-efficient buildings, using eco-friendly materials that respect the environment and people's health.

This is why our projects represent a step towards a more sustainable and responsible future.

COMPETITIONS AND TENDERS

Our expert team dedicates itself to the world of tenders (public works, integrated competitions/procurement, competitions for companies) and to contests of design or ideas.

We thoroughly study the requests and needs of contracting authorities to offer them the highest levels of competence related to participation procedures and the drafting of tenders.

Regarding the preparation of technical and administrative offers, we constantly commit ourselves to improve the quality of the content, enhancing both the communication aspects and the improvement proposals, which lead us to achieve satisfying results.

CONSTRUCTION MANAGEMENT AND SAFETY

When a project comes to life, our professional team completely manages the construction phase, offering construction management and safety coordination services during the design and execution phases.

We monitor and control the entire construction process, coordinating all the involved figures, both for public and private works. In addition, we guarantee: a high quality at every stage of the process as well as the adherence to deadlines and costs agreements.

To conclude, our group is constantly updated on new safety regulations and guidelines for the prevention and protection of personnel on site.

ARCHITECTURE AND RESTORATION

We offer design services for every type of building, public or private: from religious complexes to cathedrals, from fortresses to castles, from private palaces to theatres and auditoriums, from strategic buildings to educational institutions, from business centres to hospitality buildings.

We also count on a long experience of over 40 years in the restoration of listed historic buildings, combining a conservative, avant-garde and ecological approach.

We ensure effective and streamlined management, building trusting relationships with customers, to present projects proposals with the highest quality standards.

ENGINEERING

We count on a team of highly qualified engineers who are experts in different civils and constructions engineering disciplines: from the static consolidation of listed historical buildings and complexes infrastructures to civils structures in the Oil and Gas industry.

We really focus on the conservation of the historical, artistic and monumental heritage, intervening with projects of reconstruction, static consolidation, recovery, improvement and seismic adaptation.

We specialize in detailed engineering for industrial plants and complex infrastructures, including roads, bridges, urbanization and hydraulic works. In the Oil & Gas sector, we always respect the environment, ensuring the highest standards of quality and safety.

PLANT ENGINEERING AND FIRE PREVENTION

When it comes to Plant engineering, we boast a professional experience of over 20 years, presenting many skills and offering both specialized services and cutting-edge solutions.

We deal with the design, construction and maintenance of mechanical, electrical, special, water- sanitary, safety, lighting, and gas distribution's systems related to public and industrial sector.

We actively work on energy efficiency projects, adopting recent technologies that optimize energy saving and eco-friendly management of buildings life cycle.

Our team includes an Energy Management Expert (EME), whose role is to improve quality of services and energy performance, while reducing consumption. Furthermore, our experts are efficient in fire protection design for industrial and civil sectors.

CONSTRUCTION MANAGEMENT

Our experts, coming from many years of experience in construction companies, offer Construction Consulting and Management services of the highest level, providing the solutions to the complexities of construction sites.

The goal is to follow customers in all phases of architectural and landscape artifacts construction.

Our proposed activities cover the following activities: Strategic Planning, Project Analysis, Technical Support for all contracts, Budgeting, and Cash flow.

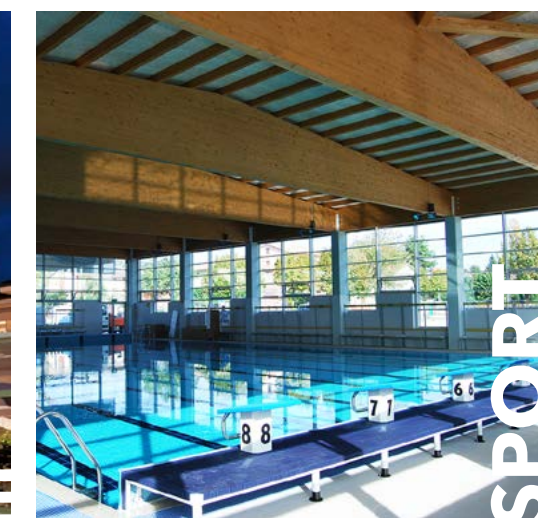

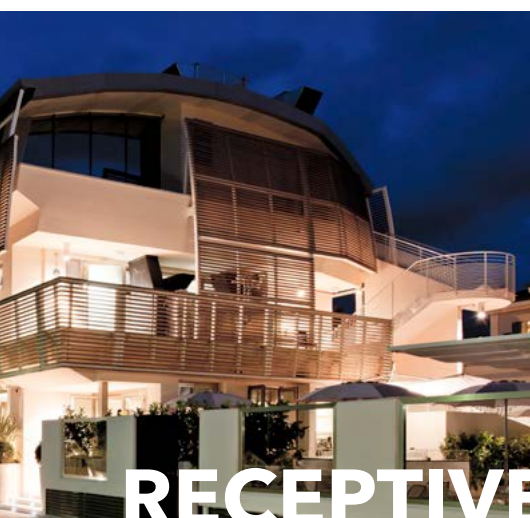

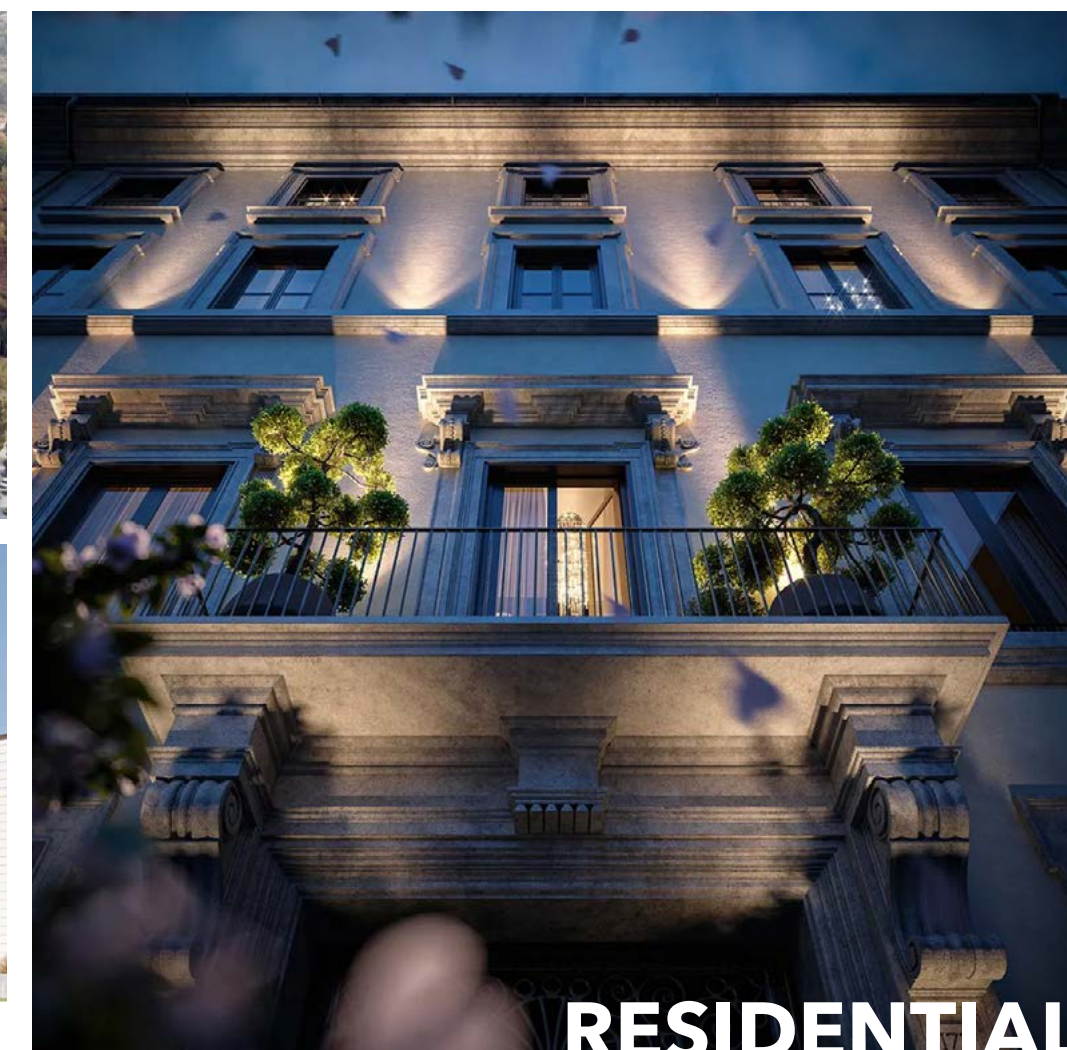

In closing, Englobe also manages to monitor activities, from cost control to site accounting, coordination of administrative documentation, etc.
