

BOLCATO STEFANO GROUP SRL

**CONSTRUCTION AND REPARATION DRUMS
SPARE PARTS - MECHANICS - WOODWORKING**

About us

Based in Arzignano, in the heart of Italy's renowned leather district, our family-owned company has been operating since 1993. We specialize in the **manufacturing of high-quality wooden drums** for the tanning industry and offer expert maintenance services for industrial machinery.

With decades of experience, we proudly supply wooden drums to some of the most prominent groups in the Veneto Leather District.

The company's journey began with Claudio Bolcato, who has dedicated his life to this work with passion and expertise.

Today, the tradition continues with the next generation: engineer Stefano Bolcato and Michela Bolcato have joined the company, working alongside their father to bring innovation and continuity to the family business.

Wooden drums

The company BOLCATO STEFANO GROUP S.r.l. manufactures a wide range of drums, in **different size until external Ø 5000 x 5000 mm** and crowns until 4000 mm, offering after defined early technical testing, **custom-made** options for the full production cycle of the leather processing (**soaking, liming, tanning, retanning, dyeing drums**).

The wood

The **wood** is accurately chosen among various types depending on the use of the drum during the tannery's supply chain.

After a long and particular phase of seasoning, the wood is cutted and treated with specific products to **ensure the durability of the structure which hosts the leathers.**

In addition BOLCATO STEFANO GROUP S.r.l. offers more alternatives for the material of its drums, depending on the customer needs.

The hardware

The hardware used to assemble the machine, is made of cast iron or spheroidal cast iron. We offer both **new** and **reconditioned hardware**, based on customer preference. Our reconditioned gear crowns are restored to like-new and re-toothed.

Once assembled, the machine has got a circular form and it can have both one or two openings: **loading door** is standard, while an **inspection door** is recommended for better monitoring.

Control can be manual or automatic, depending on customer needs.

All components are manufactured and finished in AISI 316 stainless steel, known for its strength and suitability.

The drum requires a transmission system—comprising a gearbox and electric motor—to regulate speed and power. Proper assembly ensures safe, quiet, energy-efficient, and sustainable operation across all processing phases, from soaking to dyeing.

To complete the drum BOLCATO STEFANO GROUP S.r.l. has got a **wide availability of all possible accessories** such as gutters, products mixer tanks, specified valves and different recycle system and many more.

Spare parts

BOLCATO STEFANO GROUP S.r.l., in addition to manufacturing wooden drums, offers a wide range of spare parts - both **new and reconditioned** - available worldwide.

We also provide compatible spare parts for Vallero International and Gozzini machinery,

Examples of spare parts we supply:

- GEAR CROWNS
- GEAR BOXES
- ELECTRIC PANELS
- DOOR SEALS
- BOLTS
- WASH BOARDS
- PINIONS
- BRAKES
- AND MANY MORE,,,

EXPORT WORLDWIDE

Disassembled drums prepared for international shipment.

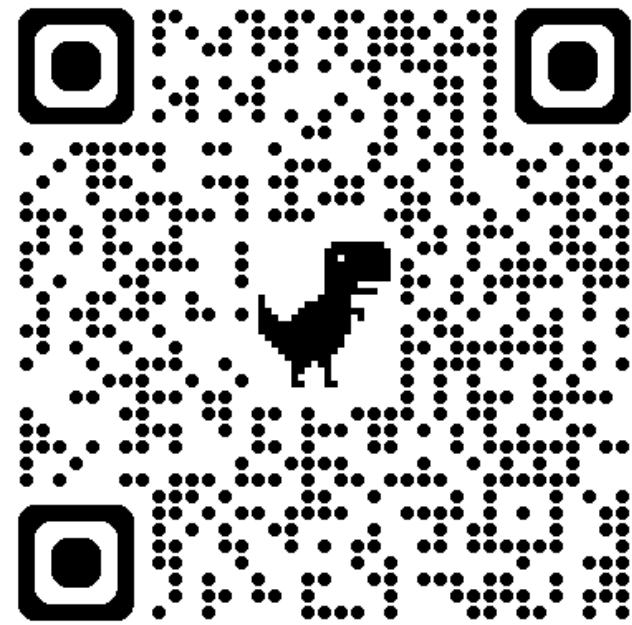

“The best always come from those who work with heart, we also bring knowledge and skilled hands.”
