

Celebrating Innovation: “Protagonisti del futuro” in ULTEM Processing

Corti Srl was among the first companies in Italy to innovate with ULTEM, recognising its potential as a high-performance thermoplastic resin from the outset.

In 1997, GE Plastics Italia – now part of Sabic’s Innovative Plastics business unit – awarded us the “*Protagonists of the Future*” certificate, recognising our pioneering role in industrial ULTEM processing.

This milestone is a testament to our decades-long expertise in processing high-performance materials for specialised technical sectors.
