ARVEX. TERRAZZO PROGRAM

TERRAZZO HISTORY

Terrazzo is a material that is made of chips, such as marble, quartz, granite, and glass, bonded together with a cement binder.

The origins of terrazzo date back to the nineteenth century in Italy, with “Pavimento alla Veneziana” (Venetian pavement), which had a similar production process.

Terrazzo started to gain popularity back in 1920s with Art Deco and was very popular throughout the middle of the twentieth century.

Terrazzo is a unique material, similar to natural stone, where every piece is unique and different, perfect to match every style and project.

Terrazzo is very eco-friendly because it is made of high-percentage of recycled material.

Terrazzo tiles can be used for indoor and outdoor application as floor application and countertops, though many are using for furniture, as well as for decorative objects.

ARVEX

TERRAZZO PROGRAM

ARVEX has introduced a Terrazzo with several colors with **dark** and **light** backgrounds: from black, white and grey shades to colored cements.

These bases are wisely combined with some of the most beautiful Italian marbles available.

One of the main materials used for this line is the **Carrara marble**, because of its compact grain and crystalline **white** color with **blue-greyish** veins.

TERRAZZO: TECHNICAL DATA

Tiles:

- 400x400x20mm (16"x16" x ¾")
- 600x600x20mm (23-½"x23-½" x ¾")

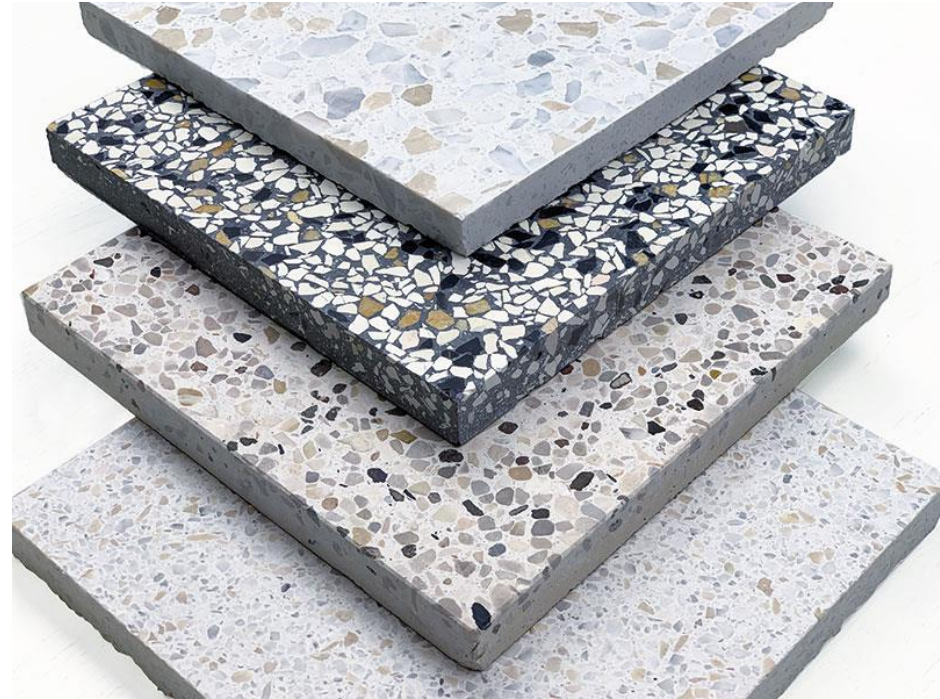

Slabs: 305x125cm (120"x50") in several thicknesses and cut-to-size.

Technology: natural stones chips bonded with cement binder, all the way through.

Tiles can be manufactured with straight cut or with micro-beveled edges.

Finishes: honed or brushed.

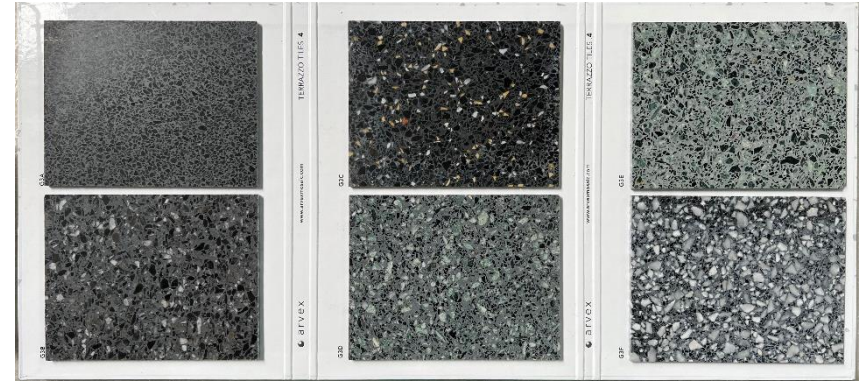

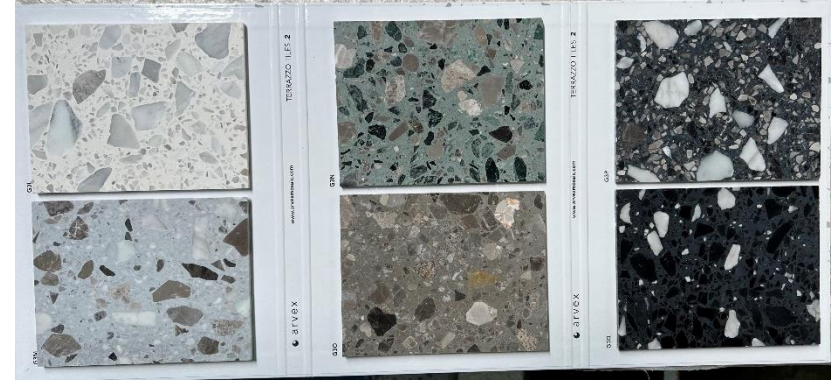

Maintenance, installation instructions and ASTM test results available upon request.
