

ENERGY

We act as a Telecom System Integrator (TSI) operating globally for many decades executing several iconic programs Onshore, Offshore and in the renewable energies.

DEFENSE

From more than 65 years, we deliver of shelters, deployable telecom solutions, mobile data centers, radio communications, TSOT, Broadcast Ship to Shore Systems, deployable Long and Short range communication systems, Link16.

ASSEMBLY & INTEGRATION CENTER

State-of-the-art Integration Center designed to streamline the deployment of telecom and security systems. Our facility is dedicated to assembling and testing complete cabinet and rack, ensuring that every component works seamlessly and meets the highest standards of quality and performance.

MISSION CRITICAL COMMUNICATIONS

Secure, modular, sustainable, and interoperable communication and information exchange systems. Crafted to interface seamlessly with both the National Defence Network (NDN) and the NATO Federated Mission Network ensuring flawless connectivity with other deployed units or mission partners.

DATA CENTER GENERAL CONTRACTOR

Construction, renovation, and maintenance of data centers, offering a comprehensive suite of services tailored to the unique requirements of these critical facilities.

CRITICAL INFRASTRUCTURE

We specialize in enhancing the resilience of critical infrastructures with advanced security systems integrated telecommunications, and sophisticated surveillance technologies.

MARITIME SITUATIONAL AWARENESS

We stand at the forefront of maritime safety and security, providing a suite of highly secure solutions trusted by Coast Guards, Navies and Offshore Facilities worldwide. Our approach synthesizes complex security systems integration with cutting-edge maritime situational awareness powered by A.I. processing. This fusion exposes the entire maritime domain in real-time, enabling a proactive stance against emerging threats and ensuring the safety of maritime assets.

BlueSHIELD revolutionizes maritime situational awareness with its comprehensive C2I platform, integrating advanced AI, diverse sensors, and data feeds for enhanced decision-making and surveillance across air, sea, and undersea realms.

CommSHIELD is a web-based software for managing radio equipment and circuits. It supports configuration, operational control, and monitoring in three security environments, aligns with NATO standards, and uses both standard and proprietary protocols for network monitoring. Its flexible architecture allows for multiple HQs and user logins, making it adaptable for both defense and civilian applications.

Page Europa, in collaboration with its Turkish subsidiary PAGETEL, specializes in engineering lightweight, transportable military shelters that meet rigorous NATO standards. These shelters, used globally, offer configurations adaptable for diverse military needs and are designed to withstand extreme conditions and threats like RFI, EMI, and EMP, ensuring top-tier protection and functionality.

BORN **1958.**

Our DNA is italian,
our approach is global.

Headquartered in **Rome**, Page Europa's global footprint extends through **strategic affiliates** in Turkey, Oman and Brunei. This international presence underpins our capability to serve a diverse client base with agility and precision, ensuring that we are always there, ready to meet our clients' needs, **anywhere and anytime.**

A LONG SUCCESSFUL STORY
IN **TELECOM & SECURITY**
SYSTEM INTEGRATION.
